## 1. ATTESTATION OF TEST RESULTS

**COMPANY NAME:** CROSBY ENGINEERING SERVICES  
1120 LARKIN VALLEY RD  
WATSONVILLE, CA 95076

**EUT DESCRIPTION:** MwM Ear Hat

**SERIAL NUMBER:** 001 (Radiated), 002 (Conducted)

**DATE TESTED:** SEPTEMBER 12-22, 2017

| APPLICABLE STANDARDS                    |              |
|-----------------------------------------|--------------|
| STANDARD                                | TEST RESULTS |
| FCC PART 1 SUBPART I & PART 2 SUBPART J | Pass         |

UL Verification Services Inc. calculated the RF Exposure of the above equipment in accordance with the requirements set forth in the above standards, using test results reported in the test report documents referenced below and/or documentation furnished by the applicant. All indications of Pass/Fail in this report are opinions expressed by UL Verification Services Inc. based on interpretations of these calculations. The results show that the equipment is capable of demonstrating compliance with the requirements as documented in this report.

**Note:** The results documented in this report apply only to the tested sample, under the conditions and modes of operation as described herein. This document may not be altered or revised in any way unless done so by UL Verification Services Inc. and all revisions are duly noted in the revisions section. Any alteration of this document not carried out by UL Verification Services Inc. will constitute fraud and shall nullify the document. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the U.S. Government.

Approved & Released For  
UL Verification Services Inc. By:

FRANK IBRAHIM  
OPERATION LEADER  
UL Verification Services Inc.

Calculated By:

JASON QIAN  
TEST ENGINEER  
UL Verification Services Inc.

## 2. TEST METHODOLOGY

All calculations were made in accordance with FCC OET Bulletin 65 Edition 97-01.

## 3. REFERENCES

All measurements were made as documented in test report UL Verification Services Inc. Document 11888590-E1V2 for operation in the 2.4 GHz band.

Output power, Duty cycle and Antenna gain data is excerpted from the applicable test reports and operation description from the manufacturer.

## 4. FACILITIES AND ACCREDITATION

The test sites and measurement facilities used to collect data are located at 47173 Benicia Street, Fremont, California, USA.

UL Verification Services Inc. is accredited by NVLAP, Laboratory Code 200065-0. The full scope of accreditation can be viewed at <http://ts.nist.gov/standards/scopes/2000650.htm>.

## 5. STANDALONE SAR TEST EXCLUSION CONSIDERATIONS

### 5.1. FCC

SAR test exclusion in accordance with KDB 447498.

The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances  $\leq 50$  mm are determined by:

$[(\text{max. power of channel, including tune-up tolerance, mW}) / (\text{min. test separation distance, mm})] \cdot [\sqrt{f(\text{GHz})}] \leq 3.0$ , for 1-g SAR and  $\leq 7.5$  for 10-g extremity SAR, where

- $f_{(\text{GHz})}$  is the RF channel transmit frequency in GHz
- Power and distance are rounded to the nearest mW and mm before calculation
- The result is rounded to one decimal place for comparison

This test exclusion is applicable only when the minimum test separation distance is  $\leq 50$  mm and for transmission frequencies between 100 MHz and 6 GHz. When the minimum test separation distance is  $< 5$  mm, a distance of 5 mm is applied to determine SAR test exclusion.

The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances  $> 50$  mm are determined by:

1.  $\{[\text{Power allowed at numeric threshold for 50 mm}]\} + [(\text{test separation distance} - 50 \text{ mm}) \cdot (f(\text{MHz})/150)]$  mW, for 100 MHz to 1500 MHz
  - $f_{(\text{MHz})}$  is the RF channel transmit frequency in MHz
2.  $\{[\text{Power allowed at numeric threshold for 50 mm}]\} + [(\text{test separation distance} - 50 \text{ mm}) \cdot 10]$  mW, for  $> 1500$  MHz and  $\leq 6$  GHz

### RESULTS

The min. separation distance of device is  $< 5$  mm

Target power = 0 dBm

$[\text{Power (mW)} / 5 \text{ mm}] \cdot \text{SQRT}(2.48) = 0.315$

The computed values are  $< 3$ ; therefore, the device qualifies for Standalone SAR test exclusion.

## 5.2. INDUSTRY CANADA

The SAR exclusion table from RSS-102 issue 5 is reproduced below:

**Table 1: SAR evaluation - exemption limits for routine evaluation based on frequency and separation distance.**

| Frequency MHz | Exemption Limits (mW)          |                                |                                |                                |                                |
|---------------|--------------------------------|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
|               | At separation distance of ≤5mm | At separation distance of 10mm | At separation distance of 15mm | At separation distance of 20mm | At separation distance of 25mm |
| ≤300          | 71 mW                          | 101 mW                         | 132 mW                         | 162 mW                         | 193 mW                         |
| 450           | 52 mW                          | 70 mW                          | 88 mW                          | 106 mW                         | 123 mW                         |
| 835           | 17 mW                          | 30 mW                          | 42 mW                          | 55 mW                          | 67 mW                          |
| 1900          | 7 mW                           | 10 mW                          | 18 mW                          | 34 mW                          | 60 mW                          |
| 2450          | 4 mW                           | 7 mW                           | 15 mW                          | 30 mW                          | 52 mW                          |
| 3500          | 2 mW                           | 6 mW                           | 16 mW                          | 32 mW                          | 55 mW                          |
| 5800          | 1 mW                           | 6 mW                           | 15 mW                          | 27 mW                          | 41 mW                          |

| Frequency MHz | Exemption Limits (mW)          |                                |                                |                                |                                 |
|---------------|--------------------------------|--------------------------------|--------------------------------|--------------------------------|---------------------------------|
|               | At separation distance of 30mm | At separation distance of 35mm | At separation distance of 40mm | At separation distance of 45mm | At separation distance of ≥50mm |
| ≤300          | 223 mW                         | 254 mW                         | 284 mW                         | 315 mW                         | 345 mW                          |
| 450           | 141 mW                         | 159 mW                         | 177 mW                         | 195 mW                         | 213 mW                          |
| 835           | 80 mW                          | 92 mW                          | 105 mW                         | 117 mW                         | 130 mW                          |
| 1900          | 99 mW                          | 153 mW                         | 225 mW                         | 316 mW                         | 431 mW                          |

| 3500          | 86 mW                          | 124 mW                         | 170 mW                         | 225 mW                         | 290 mW                          |
| 5800          | 56 mW                          | 71 mW                          | 85 mW                          | 97 mW                          | 106 mW                          |

## RESULTS

The min. separation distance of device is < 5mm. The Exemption Limit for the frequency 2450 MHz is 4 mW.

As the maximum output power is 1 mW conducted and 1.26 mW EIRP, the DUT qualifies for SAR test exclusion.

**END OF REPORT**
