

Alice,

Technical review of the referenced application has been performed. Please provide responses to the questions listed below, so that review of the application may be completed and a grant issued.

Thank you.

Gregory Czumak
EMC Consultant
MET Labs

RT Questions:

1. What is the actual tuning range of the EUT, lowest channel to highest channel?
2. Radiated emission data for the second harmonic of the fundamental emission has been provided. What detector function was used to make these measurements? Peak? Average? What RBW and VBW?
3. The table of radiated emissions on page 19 of 27 of the test report is illegible. Please provide another copy of the table.
4. Please provide spectral plots of the fundamental emission tuned to both the lowest and highest channel, in order to demonstrate compliance with the bandedge requirement of Section 15.249(d).
