

Operation Description

The 1/24 Bobble Head RC Car is powered by 2 X 1.5V “AA” size battery. There are four buttons in the front of EUT. When the forward, backward, turn left and turn right button is pressed once, it will transmit a radio signal to receiver

Refer to the circuit design, the circuit description is listed as below:

- ❑ IC101 and associate circuit act as encoder.
- ❑ X1 and associate circuit act as oscillator.
- ❑ Q101, Q102 and associate circuit act as key board control.
- ❑ T2 and associate circuit act as transmitter amplify.
