To FCC

**Overall Assessment Letter for A712+
FCC id: Q78-A712PLUS**

I have reviewed this application and find it compliant.

This is an application for a GSM 850 / GSM 900 / DCS 1800 / PCS 1900 Mobile Phone. The only relevant US Frequencies used are 850 MHz GSM (Part 22H) and 1900 MHz GSM (Part 24E). The device does not support GPRS.

No peripherals were included in the application form and therefore no application for a JBP grant was made. The client has confirmed that the USB port is for charging purposes only and this is consistent with the user manual.

Please note this product, model A712+ is a variant of A711+ (FCC ID: Q78-A711PLUS). The applicant has declared that the enclosure of the device has changed and therefore has provided EMC and SAR test results for this filing. There is partial reliance on the original EMC report of the A711+ device, therefore there are 2 test reports being submitted within this filing. SAR has been re-tested due to the changes made. A product similarity description is provided within the submission.

As a result of the assessment review external and internal photos were requested to be submitted and confidentiality letter was also obtained. The original label exhibit did not show the label placement on the device, and this was subsequently received.

Yours sincerely

Allen Ferry
