Bay Area Compliance Laboratories Corp.

1274 Anvilwood Ave.

Sunnyvale, CA 94089, USA

Subject: Authorization Correction for FCC ID: Q78-CBTSI28C

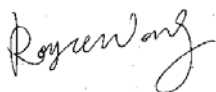

To Whom It May Concern:

We would like to request a correction of the listed output power for ZTE Corp. FCC ID: Q78-CBTSI28C. The device should have been tested and certified for its 60 W configuration, but instead was tested and certified in the 45.75 W configuration. No change has been made to any hardware or software of this equipment; the output power is configurable by ZTE through firmware at the point of manufacture.

The revised test report (Q78-CBTSI28C Test Report rev. 1) featuring the testing performed with the correct output power has been attached with this correspondence.

Please contact me if you have any further questions or concerns.

Sincerely Yours,

Royce Wang

Product Certification Director

ZTE Corporation
