Overall Assessment Letter for K3565-Z
FCC id: Q78-K3565-Z

This is an application for a mobile USB stick supporting GPRS/EGPRS. The device supports the 850 MHz and 1900 MHz frequency range. Since the device also has a USB port for connection to Computers a filing for a Class B Computer peripheral has also been made. The device additionally supports GSM 900, DCS 1800, WCDMA 2100 and WCDMA900 however this is not relevant as it is not supported in North America.

Please note the following:

- 1: The highest reported body SAR for GSM 850 was 1.11 W/kg at 836.6 MHz with 5mm separation side 1 configuration. The highest reported body SAR for PCS 1900 was 1.18 W/kg at 1850.2 MHz with 5mm separation side 2 configuration.
- 2 The device has a USB port and has been certified as a Part 15B computer peripheral but note that the device is also marked with the FCC label and the client has been advised that this is not required.

I underwent the FCC RF exposure training at BABT in July 2007.

Yours sincerely

Allen Ferry
Compliance Manager, BABT
