

WIFI Hotspot Function Clarification

As regard to the wireless telecommunicating WIFI module used in ZTE

V6020, FCC ID: Q78-V6020. ZTE cooperation here specify that,

The setup menu of the terminal system has deleted the WIFI hotspot menu

and at the same time the system will send the message to shut up the

wifi-launching chip so that other mobile-phones will fail to searching this

wifi hotspot and using the data service.

Yours Sincerely,

Royce Wang

ZTE product approval manager
