

ZXA10 F460 MPE calculation

Dear Reviewer,

The maximum measured power output is

802.11b/g: 17.0dBm

The maximum antenna gain for integral antenna is

802.11b/g: 2.0dBi

The maximum permissible exposure is defined in 47 CFR 1.1310 with 1 mW/cm².

The Transmitter is using Internal antennas that operate at 20 cm or more from nearby persons.

The maximum permitted level is calculated using the general equation:

$$S = P' / 4\pi R^2$$

$$802.11b/g: P' = 17.0\text{dBm} + 2.0\text{dBi} = 19.0\text{dBm} = 79.4\text{mW}$$

$$R = 20\text{cm}$$

$$\pi = 3.1416$$

Solving for S, the power density at 20 cm is

$$802.11b/g: \mathbf{0.016\text{mW/cm}^2}$$
