# **Product Overview**

# **Front view**

### From top to bottom

**Power**—Lights up green when the modem router is powered on.

**Receive**— Light blinks green while the modem router is searching for a connection over the cable network. Light is solid green when the modem router is receiving data from the cable network. Light is solid blue during multichannel bonding.

**Send**—Light blinks green while the modem router is searching for a connection over the cable network. Light is solid green when the modem router is sending data to the cable network. Light is solid blue during multichannel bonding.

**Status**— Lights up green when the modem router has an Internet connection. Flashes green while the modem router is establishing the Internet connection.

**Ethernet**—Light is solid green when the modem router is connected to a device through the LAN port.

**2.4 GHz Wi-Fi**—Light is solid green when broadcasting 2.4 GHz signal. Light blinks when the modem router is actively sending or receiving data over the network.

**5 GHz Wi-Fi**—Light is solid green when broadcasting 5 GHz signal. Light blinks when the modem router is actively sending or receiving data over the network.

**USB**—Light is solid green when the modem router is connected to a device through the USB port.

**WPS**—Light is solid green when a Wi-Fi Protected Setup<sup>™</sup> connection is successfully established. Light blinks slowly while WPS is setting up a connection, and blinks rapidly if an error occurs. Light is off when WPS is idle.

### From top to bottom

**USB port**—Connect and share a USB drive on your network or on the internet.

**Reset button**—Press and hold for about five seconds to reset the modem router to factory defaults.

**Ethernet ports**— Connect the modem router to computers and other devices with ethernet cables (also called network cables).

**Cable port**— Connect the modem router to an active cable signal with a coaxial cable.

**Power port**—Connect to the included power adapter.

# Installation

# Setup

Disconnect any modems or modem routers before setting up your new modem router.

1. Connect a coaxial cable to the cable port on the modem router and a wall jack.

2. Connect the power adapter to the modem router and plug into a power source.

- 3. Connect to the secure Wi-Fi name on the sticker in the Quick Start Guide that came with your modem router. There is also a sticker on the bottom of the modem router. (You can change these details later.) Select the option to automatically connect to this network in the future. You will not have internet access until you complete modem router setup.
- 4. Open a web browser and type <a href="http://192.168.1.1">http://192.168.1.1</a> in the address bar.

5. In the pop-up window, enter "admin" in the Password field. Click Log in. The web-based setup page of your modem router will appear.

6. Make sure you are on the Quick Start tab. Click Begin to start the setup wizard.

# **Setup Wizard**

Accept the License Terms and click Next.

Choose an internet service provider, activate your modem router and click Next.

Create a Wi-Fi name and password and click Next.

Create an admin password and click Next.

Write down your settings somewhere you'll remember and click Save.

Click **Done** and get online.

When your modem router is ready, the top four lights (power, receive, send, status) will be solid.

Advanced users can select "I want to skip the Setup and configure the router manually."

If you choose to manually set up the modem router, you will need to have the following information available for activation:

- Account number of your broadband subscription
- Phone number linked with your account
- Serial number of the modem router (on the back of the unit)
- MAC address of the modem router (on the back of the unit)

### To activate:

Open a web browser from a computer that's connected directly to the modem router. This is where you will need the information above (account number of your broadband service, phone number and new modem router device identifiers). Some service providers have additional setup steps that will automatically appear in the browser – if not, visit the appropriate link below. Follow the steps for your internet provider or call them if you are unable to get online.

Note—The modem router may reboot several times during this process and activation can take up to five minutes.

After activation, you should be able to connect to the internet wirelessly via your modem router or a wired connection between your computer and the modem router.

# **Browser-Based Utility**

If you would like to change the modem router's advanced settings, use the browser-based utility. For more help with the utility, click the *Help* link in the upper-right corner of the screen or go to our support website www.linksys.com/support/cg7500.

# How to access the browser-based utility

1. Launch the web browser on your computer, and enter the router's default Internet Protocol (IP) address, 192.168.1.1, in the address field. Press Enter.

- 2. In the *Password* field, enter the password created during setup. If you did not change the password, the default is "admin".
- 3. Click Log in to continue.

# How to use the browser-based utility

Navigate the utility by using the tabs along the top of the screen and the corresponding specific menus down the left side of the screen.

If you change any settings on a screen, you must click the **Save** button at the bottom of the screen to apply your changes. Likewise, click **Cancel** to clear your changes.

**Note**—To learn more about any field, click the Help link in the upper-right corner of the screen.

# System Status

# **Status**

### Status > Overview

Overview tells you how long the router has been working since its last restart (Router Uptime), and how long it has been connected to the internet (Internet Uptime) in that period. This screen also shows your Wi-Fi name and password, and some details on any Wi-Fi devices managed by Parental Controls.

# Status > System Information

System Information page shows basic information such as the MAC address, software version, and the time that has elapsed since the last restart etc.

# Status > Wi-Fi

The Wi-Fi screen provides detail about all Wi-Fi bands, including Guest Wi-Fi. Clicking the Wireless Clients button displays details about any connected Wi-Fi devices.

# Configuration

# Connectivity

## Connectivity > Local Network

Your router ships with the most common settings, and several settings are configured during setup. You may never have to change these settings.

### **LAN IP Address**

The router's IP address on your Wi-Fi. If you change this address, you'll have to reconnect your devices to your router.

#### **Subnet Mask**

The router's subnet mask on your Wi-Fi. It is used to divide a network into subnets so information can be routed correctly to computers and devices.

#### **DHCP Server**

DHCP (Dynamic Host Configuration Protocol) is enabled by default. DHCP assigns IP addresses as needed to devices connected to your Wi-Fi.

### **DHCP Starting Address**

The value that the DHCP server starts with when issuing IP addresses.

### **DHCP Ending Address**

The value that the DHCP server ends with when issuing IP addresses.

### **DHCP Lease Time**

The amount of time a Wi-Fi user is allowed connection to the router with her current IP address. When the time has expired, the user will be automatically assigned a new IP address, or the lease will be renewed.

#### Static DNS 1-3

Domain Name System (DNS) is how the internet translates a domain or website name into an internet address, or URL, that you can access. Your ISP will provide at least one DNS server IP address. You can enter up to three.

#### **WINS**

Windows Internet Naming Services manages each computer's interaction with the internet. If you use WINS a server, enter the server's IP address. Otherwise, leave it blank.

### **DHCP Reservations**

Click to add or change the DHCP reservations used on your Wi-Fi. DHCP reservations allow you to assign a unique, fixed IP address to a specific device on your Wi-Fi. This is helpful when managing devices such as print servers, cameras, printers or game consoles. A fixed IP address is also recommended if you want to use port forwarding for devices that need to receive inbound date from the internet. To assign an IP address and MAC address to a device, click **Add** and then enter the device name, IP address, and MAC address. When finished, click **Apply**.

### Connectivity > WAN Setup

### **WAN Information**

Select your internet connection type. If you don't know, call your ISP.

**Automatic Configuration - DHCP—**Select if your ISP assigns IP addresses dynamically, meaning you get different IP addresses each time you start your computer.

**Static IP**—Select this if you use the same IP address each time you connect to the internet. Enter your internet address, subnet mask, default gateway, and DNS entries. You can get this information from your ISP.

#### **Domain Name Server Address**

Most users get a Domain Name Server address automatically from their ISP. If you subscribe to your own DNS server, select Use These DNS Servers and complete the field(s).

# **Option**

This section is for advanced users.

# Connectivity > Advanced Routing

Click **Add** to assign a specific IP address, subnet mask, and gateway address to a specific device. Click **Apply**.

# Connectivity > Connected Devices

Information about devices connected to your Wi-Fi.

# Wi-Fi

### Wi-Fi > Wi-Fi Settings

### Wi-Fi Name

Personalize the Wi-Fi name that appears in the list of available networks.

### **Broadcast Wi-Fi Name**

Allows Wi-Fi devices to detect your Wi-Fi name when they survey the local area for available Wi-Fi. Not broadcasting your Wi-Fi name does not improve your Wi-Fi security.

### **Network Mode**

Select the standard your Wi-Fi supports.

### **Bandwidth**

The Auto setting provides the best performance with Wireless-B, Wireless G, and Wireless N (2.4 GHz), Wireless-A, Wireless-N, Wireless-AC (5 GHz) devices. For a channel width of 20 MHz, select 20 MHz only.

### Channel

Select the channel for Wireless-B, Wireless-G, Wireless-N, Wireless-A, or Wireless-AC networking. If you're not sure which one to use, choose *Auto*.

### **Security Mode**

Each device on your Wi-Fi must use the same security mode.

### **Password**

Wi-Fi devices must enter this password, sometimes called a security key, to connect to your Wi-Fi.

# Wi-Fi > MAC Filtering

MAC filtering is a way to allow or deny access to your network by identifying specific MAC addresses. It is not a good substitute for a secure Wi-Fi password. If you enable MAC Filtering, Wi-Fi Protected Setup will be disabled automatically.

### **MAC Filters**

Select Enabled to begin filtering Wi-Fi devices by MAC address.

### **Filter Options**

Allow Access List limits access to devices whose MAC addresses are listed. All other devices will be denied. Deny Access List allows you to create a list of MAC addresses that cannot access your network. All devices not on that list will be able to connect to your network.

### **Add MAC Address**

Add a MAC address to your list.

## Wi-Fi > Wi-Fi Protected Setup

Wi-Fi Protected Setup makes it easy to add devices to your Wi-Fi without having to enter a Wi-Fi name and password. To use Wi-Fi Protected Setup, the device you want to connect must support it.

### WPS Enabled

If you uncheck this box, you can't use Wi-Fi Protected Setup to connect devices to your Wi-Fi, and the Wi-Fi Protected Setup push button on your router will also be disabled.

#### **Push Button**

Use this if your device has a Wi-Fi Protected Setup button or prompts you to press the Wi-Fi Protected Setup button on your router. Press or click the Wi-Fi Protected Setup button on the device you want to connect to Wi-Fi, and then click the button on this page.

### **Router PIN**

Use this if the device you're connecting asks for the router PIN (Personal Identification Number). The router PIN is also listed on the bottom of the modem router.

### **Device PIN**

Use this if your device has a Wi-Fi Protected Setup PIN. Enter the PIN from the device into the PIN field and then click **Register**.

### Wi-Fi > Guest Access

Guest Access is a way to share internet access. Guests can get online, but they can't see or access other connected devices. You can turn guest access on and off, give it a name and password, and set the number of guest devices allowed.

When you set up your router, a secure guest network was created automatically on the router's 2.4 GHz/5 GHz band. Guest access is available on these two bands. Be sure to keep this in mind if you're connecting other networking devices, such as an extender. It should be configured to use the 2.4 GHz/5 GHz band as well if you plan to use guest access.

## Wi-Fi > Advanced Settings

IGMP Snooping is turned on by default. Only advanced users should turn off this setting.

# **External Storage**

## External Storage > Status

Click **Eject** before physically disconnecting a USB disk from the modem router. This prevents the possible loss of data, which may occur if you remove the disk while it is transferring data.

## External Storage > Folder Access

You can decide who has access to external storage connected by USB to your modem router. When Shared Status is disabled, anyone on your network can access all content on your storage device. If it is enabled, you can specify which users can see which content.

Click **Eject** before physically disconnecting a USB disk from the modem router. This prevents the possible loss of data, which may occur if you remove the disk while it is transferring data.

# External Storage > FTP Server

You can access the folders on your storage device remotely from anywhere you have an internet connection using an FTP (File Transfer Protocol) server. You can access the content using a web browser or FTP software.

Server Name - Personalized the name of your FTP server.

#### **FTP Server**

Select to enable the FTP server, and make content available remotely.

### **Internet Access**

Select to allow access to your storage device with a web browser.

#### **FTP Port**

The default port, 21, will work for most users. Advanced users may change to a different port to serve their needs.

#### Add FTP Folder

To add a FTP folder, enter the server name and the information to use.

## External Storage > Media Server

A media server lets you share across your network content on an attached external storage device. You can share media with devices that are UPnP AV (Audio and Video)-enabled or DLNA (Digital Living Network Alliance)-certified devices in your home. These

include digital media players, gaming consoles with a built-in media player, and digital picture frames.

You can specify which folders are used by the media server, add and disabled/delete folders, and specify how often the folders are scanned for new content.

#### Media Server

Select to share media.

### **Server Name**

Personalize the display name of your UPnP media server.

#### Scan Interval

Specify how often the modem router scans folders on the external storage device for new content. Scanning can take several hours, especially the first time the device is scanned, or if you add a lot of new content. Subsequent scans should take less time. To scan the folders immediately, click **Scan Now**.

Click **Add New Folder** to add a new shared media folder. Select the folder on the attached external storage device that contains the content you want to share.

# External Storage > Account

Two user accounts are preset for the modem router: admin and guest. The password for the admin user is the modem router's admin password. The password for the guest user is "guest".

### **Group Management**

If you want to add to the default groups, click **Create New Group** and enter the name, description and the type of permission the group will have. Select *Read and Write* to allow the group to view, edit, or delete content. Select *Read Only* to limit the group to viewing content.

### **User Management**

If you want to add a user to one of your groups, click **Create New User** and enter a user name, description, and password, and assign the user to a group.

# **Security**

## Security > Firewall

The firewall, which protects your Wi-Fi from internet threats, is enabled by default.

# Security > DMZ

The Demilitarized Zone (DMZ) feature can be used to expose a web server, mail server, or web camera to the internet so anyone can access it. This feature is not recommended because it presents significant security risks to the device that you designate for the DMZ. The device will not be protected by the built-in firewalls, internet filters, or modem router web filters.

With DMZ enabled, use the *Destination IP Address* to identify the device you wish to be in the DMZ. Click **View DHCP Client Table** to see a list of connected devices. Select the IP address of the desired device and it will automatically populate the *Destination IP Address* field.

## Security > DDNS

The DDNS feature lets you configure a domain name for your home network, which you can use to easily find your network on the internet. This is useful if you want to remotely access a USB drive or web camera over the internet.

Select your DDNS service and complete the fields with information provided to you by your DDNS provider.

## Security > Single Port Forwarding

Single Port Forwarding directs inbound traffic from the internet on a specific port to a single device on your Wi-Fi. For example, forwarding inbound web requests, typically on port 80, to a web server. To forward to multiple ports, create additional entries to forward additional ports to the same IP address. Click **Add a New Single Port Forwarding.** 

### **Application name**

The application or device name using port forwarding. Refer to your device's documentation for recommendations if needed.

#### **External Port**

Enter the external port number.

### **Internal Port**

Enter the internal port number.

#### **Protocol**

Select the protocol to use.

#### **Device IP Address**

Enter the IP address you have reserved for the computer you want to forward internet traffic to.

#### **Status**

Select to use the port forwarding. If you don't want to use port forwarding but want to keep the information in the table, unselect the checkbox.

### Security > Port Range Forwarding

Port forwarding directs inbound traffic from the internet on range of ports to a specific device on your Wi-Fi. For example, some applications can use a range of ports so that if one port is busy, they can try another one. Click **Add a New Port Range Forwarding**.

### **Application name**

The application or device name using port forwarding.

### **Start-End Port**

The port number or range of ports used by the application or device for port forwarding. To specify a range of ports, separate the first and last port numbers with a dash, for example, 5800-5900.

### **Protocol**

Select the protocol to use, typically TCP.

#### **Device IP Address**

Enter the last three digits of the IP address of the computer running the software that requires port forwarding.

#### **Status**

Select to use port range forwarding. If you don't want to use port forwarding but want to keep the information in the table, unselect the checkbox.

# Security > Port Range Triggering

Port range triggering allows the modem router to watch outgoing data for specific port numbers. The cable modem remembers the IP address of the device that sends the data so returning data is routed back to the proper device. This is useful when using a USB or Bluetooth headset for online chat and gaming. Click Add a New Port Range Triggering.

### **Application name**

The application or device using port triggering.

### **Trigger Port Range/Forward Port Range**

The port number or range of ports used by the application or device for port triggering.

#### **Status**

Select to use port range triggering. If you don't want to use port range triggering for that entry, but want to keep the information in the table, unselect the checkbox.

# **Administration**

### Administration > Password

Allows you to change the modem router password. Use it to access modem router settings and features such as Guest Access and Parental Controls. To change the password, first enter the old password, then type a new password and confirm it. Click **Save**. Be sure to write down this password and keep it somewhere safe.

### Administration > Time Zone

Set the current time zone for your area and adjust the time for daylight savings time changes.

## Administration > Remote Management

Select a remote access protocol and identify a port to use when accessing your modem router settings when away from home and not connected to your Wi-Fi.

### **Protocol**

Select the protocol for remote access.

### On/Off

Enabled/Disabled the remote access.

#### Port

Enter the port number that will be open to remote access.

Allow Any Host to Access the Device Remotely

Select to allow remote access to the modem router from any external IP address. Deselect to specify an external IP address or range of IP addresses allowed to remotely access your modem router.

## Administration > Gateway Function

UPnP (Universal Plug and Play) allows devices connected to Wi-Fi to discover each other and automatically create working configurations. Examples of UPnP-capable devices include web cameras, online gaming applications, and VoIP devices. UPnP is enabled by default.

Select to allow users to change router settings or disable your local internet connection while using UPnP.

SIP ALG (Session Initiation Protocol Application Layer Gateway) is a feature that allows certain VOIP service providers to get through your modem router's firewall. Select to use this feature.

# Administration > Backup

### **Backup Your Configurations**

Back up your modem router's settings to a file on your computer. You can use the file later if you need to restore the settings. To create a backup file of the current settings.

### **Restore Your Configurations**

Click Choose File and navigate to the backup file you want to restore. Click Restore.

### Administration > Device Reset

### **Restart the Modem Router**

Restarts your modem router by turning it off and then on again. All devices connected to your modem router will be disconnected. They will reconnect automatically when the restart finishes.

### **Reset to Factory Default Settings**

Resets all modem router settings to how they were before you set it up. A reset changes the modem router name, password, security settings, parental control settings, and all other settings you have changed. After a reset, you can customize your settings again.

# Parental Controls

Use Parental Controls to manage internet use by blocking access per device. You also can block specific sites per device. Once you turn on Parental Controls, click **Block Internet Access** next to a device in the Connected Devices table. Select Never, Always or Specific Times. If you choose Specific Times, you will have to select the days and times you want to block the internet on that device.

Click *Add* next to *Block Specific Sites* and Choose Block Sites and enter the URL of the sites you want to block from that device. Click *Apply*. Click *Add* again to block another site.

Use the *Manage Device Table* to change parental control settings. Click **Manage** to make changes and Delete to undo all parental controls on a device.

Click **Add a New Device** to assign parental controls to a new device on your Wi-Fi. Enter a device name and the device's MAC address, then choose when to block the internet to that device.

Click **Save** before leaving the page.

# Troubleshooting

# **DOCSIS Provisioning**

This screen provides details on the provisioning of your modem router.

# **Diagnostics**

Use diagnostics to aid in troubleshooting your modem router's connectivity.

### **Ping**

Check whether a destination IP/URL is available.

### **Traceroute**

Trace the routing path to the destination IP/URL.

### **Abort**

Stop ping test or traceroute test.

### **DOCSIS WAN**

The DOCSIS WAN screen shows a DOCSIS overview, and downstream/upstream activity overview. Click **Reset FEC Counters** to start counting new errors (Correcteds/Uncorrectables).

## **DOCSIS** Event

The DOCSIS event log chronicles DOCSIS errors that generated log entries.

# Report

The report shows details about your router and its current network settings. This information can be very helpful if you have to call your ISP or Linksys Support for help with your Internet connection or router.

The following buttons are available for both the Devices and Report pages:

### Refresh

Redisplays the most current information.

### **Print**

Prints the information currently displayed.

All rights not expressly granted to you by Belkin under this Agreement are hereby reserved by Belkin. You will not acquire such rights, whether through estoppel, implication, or otherwise. . APP SOFTWARE RESTRICTIONS. If you have downloaded the Software from an App Store, you are also subject to any erms of use of that App Store. Such terms of use may prohibit you from doing some of the things you are permitted to do under this Agreement, or permit you to do some of the things you are prohibited from doing under this Agreement. In addition, application of the App Store's terms of use may result in other terms of this Agreement not being applicable to the Software or applying in a different way than this Agreement states. If your use of the Software is subject to an App

Store's terms of use, then in the event of any conflict or ambiguity between the terms of this Agreement and such Ap

Store's terms of use, the App Store's terms of use will govern, but only to the extent necessary to resolve such conflict or ambiguity, and the terms of this Agreement will otherwise remain in full force and effect. Notwithstanding anything to the contrary in this Agreement, by using the Software, you acknowledge and agree that it is solely your responsibility

to understand the terms of this Agreement, as well as the terms of use of any App Store that may be relevant to the

. **UPGRADES AND UPDATES**. While Belkin is not required to do so, Belkin may provide you with upgrades or updates to this Software. This Agreement will govern any upgrades provided by Belkin that replace and/or supplement the original firmware and/or Software, unless such upgrade is accompanied by a separate end user license agreement, in which case the terms of that end user license agreement will govern. If you decide not to download and use an upgrade or update provided by Belkin, you understand that you could put the Software at risk to serious security threats or cause the Software to become unusable or unstable. Some Products include an auto-update feature, which gives us the ability to make updates automatically. You can change auto-update options by changing your settings within the Product account information. In very limited cases, updates may still be automatically applied, regardless of the autoupdate setting. For example, we may provide an automatic update that fixes a security breach or vulnerability to your network. We may also provide you with updated Software data files automatically to benefit you, such as to provide you with updated device information to identify new devices in your network. These data files do not update your firmware, but consist of Software files that are cached on your Product and override older files. By agreeing to this Agreement

DATA AND PRIVACY. We at Belkin are committed to protecting your privacy. Our goal is to provide you with a positive perience when using our apps, products and services, while at the same time keeping your Personal Information, defined in the Belkin Privacy Policy (the "Privacy Policy"), secure. Our privacy practices are described in the Privacy Policy, as well as in separate notices given when an app, product or service is purchased or downloaded. By using Belkin Products or providing us with your Personal Information, you are accepting and consenting to the practices, terms and conditions described in the Privacy Policy. At all times your information will be treated in accordance with the Belkin Privacy Policy, which is incorporated by reference into this Agreement and can be viewed here. OPEN SOURCE SOFTWARE. You hereby acknowledge that the Software may contain Open Source Software (a

fined below). This license does not apply to Open Source Software contained in the Software. Rather, the terms and conditions in the applicable Open Source Software license shall apply to the Open Source Software. Nothing it this Agreement limits your rights under, or grants you rights that supersede, any Open Source Software license. You acknowledge that the Open Source Software license is solely between you and the applicable licensor of the Open Source Software. You shall comply with the terms of all applicable Open Source Software licenses, if any. License and opyright information for the Open Source Software are disclosed in the Product documentation, within the "Suppor tab on Belkin websites and within the "Contact Us" section on Linksys websites. Belkin is not obligated to provide any maintenance or support for the Open Source Software or any Product Software that has been modified by you pursuant to an Open Source Software license. "Open Source Software" means any software or software component or technology that is subject to an open source

license. Open source licenses are generally licenses that make source code available for free modification and distribute but can also apply to technology received and distributed solely in object code form. Examples of open source licenses include: (a) GNU's General Public License (GPL) or Lesser/Library GPL (LGPL); (b) the OpenSSL License; (c) the Mozilla Public License; (d) the Berkeley Software Distribution (BSD) License; and (e) the Apache License . INTELLECTUAL PROPERTY RIGHTS. All title and intellectual property rights (including without limitation all pyrights, patents, trade secret rights and trademark rights) in and to the Software (including but not limited to any

content incorporated into the Software), the accompanying printed materials, and any copies of the Software, are owned by Belkin or its suppliers. Therefore, you must treat the Software like any other material protected by laws and treaties relating to international property rights and in accordance with this Agreement. 3. THIRD PARTY PRODUCTS AND SERVICES. The Software may contain links or other features that make it easier for you to visit or log-in to independent third-party websites ("Linked Sites"). These features are provided solely as a convenience to you. Linked Sites are not under Belkin's control, and Belkin is not responsible or liable for and does not endorse the content or practices of such Linked Sites, including any information or materials contained on such Linked Sites. You will need to make your own independent judgment regarding your interaction with these Linked Sites. You hereby waive and release any legal claim you might have against Belkin with respect to these sites or third-party products or services, and your use of these sites, third-party products or services. We encourage you to read the terms and conditions and privacy policy of each third party website that you choose to visit. INDEMNITY. NOTHING IN THIS AGREEMENT EXCLUDES, RESTRICTS OR MODIFIES ANY CONDITION, WARRANTY, GUARANTEE, RIGHT OR REMEDY IMPLIED OR IMPOSED BY ANY AU/NZ APPLICABLE LAWS WHICH CANNOT LAWFULLY BE EXCLUDED, RESTRICTED OR MODIFIED. If any condition, warranty or guarantee is implied into this Agreement or imposed on Belkin under AU/ NZ Applicable Laws and cannot be excluded, but Belkin has a choice of a remedy, then Belkin's liability for breach of the condition, warranty or guarantee is limited to one or more of the following, at Belkin's option: (a) in the case of goods, th it would be unreasonable to expect the products to be repaired; or (b) in the case of services, the supplying of the service again, or the payment of the cost of having the services supplied again. In addition to these remedies a "consumer" (within the meaning of the CGA) may claim for any reasonably foreseeable loss (other than loss or damage through reduction of

2. LIMITED WARRANTY AND DISCLAIMER. Belkin warrants that any media (such as a CD or USB stick) on which the s provided will be free from defects in materials and workmanship under normal use for 90 days from the date of its original purchase (the "Warranty Period"). If you make an eligible software media claim under this warranty during the Warranty Period (the "Limited Warranty"), Belkin will honor this warranty by replacing the Software media. To make a claim under this Limited Warranty, return the defective media along with the sales receipt directly to Belkin at the following address: Belkin International, Inc., 12045 E. Waterfront Drive, Playa Vista, CA 90094, This Limited Warranty is void if failure of the media has resulted from accident, abuse, or misapplication. Any replacement media will be warranted for the remainder of the original Warranty Period or thirty (30) days, whichever is longer. In relation to consumers who are entitled to the benefit of the CGA, the media on which Software is provided comes with guarantees that cannot be excluded under New Zealand law, and this Limited Warranty is in addition to any statutory rights such consumers may have under New Zealand law. This Limited Warranty does not apply in Australia. Consumers in Australia have statutory rights in relation to the Software and media on which the Software is provided under the

Australian Consumer Law. EXCEPT FOR THIS LIMITED WARRANTY ON MEDIA.
