Test Report

Prepared for: G-Way Microwave

Model: BDA-PS8NEPS-37/37-90-AB

Description: Bi-Directional amplifier (BDA), used to amplify DL and UL frequencies in the CMRS 800 band.

FCC ID: Q8KPS8N3790AB

To

FCC Part 1.1310

Date of Issue: October 13, 2015

On the behalf of the applicant:

**G-Way Microwave
38 Leuning St.
South Hackensack, NJ 07606**

Attention of:

**Gregory Tsvika Blekher, Project Engineer
Ph: (201) 343-6388
E-Mail: t_blekher@gwaymicrowave.com**

ILAC / A2LA

Compliance Testing, LLC, has been accredited in accordance with the recognized International Standard ISO/IEC 17025:2005. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (refer joint ISO-ILAC-IAF Communiqué dated January 2009)

The tests results contained within this test report all fall within our scope of accreditation, unless below

Please refer to <http://www.compliancetesting.com/labscope.html> for current scope of accreditation.

Testing Certificate Number: **2152.01**

FCC Site Reg. #349717

IC Site Reg. #2044A-2

Non-accredited tests contained in this report:

N/A

EUT Description

Model: BDA-PS8NEPS-37/37-90-AB

Description: Bi-Directional amplifier (BDA), used to amplify DL and UL frequencies in the PS 800 MHz band.

Firmware: N/A

Serial Number: N/A

Additional Information:

The EUT is classified as a Part 20 (CMRS 90-S) **Class B** industrial signal booster.

The EUT is a Bi-directional Amplifier that operates from 817 – 824 MHz (Mobile to Base) and 862 – 869 MHz (Base to Mobile).

EUT Operation during Tests

The EUT was tested under normal operating conditions with the front panel attenuators set to 0 dB for all measurements.

MPE calculations were performed at the manufacturer's rated output of +37 dBm using an antenna with 0 dBi gain.

MPE calculations were performed at the manufacturer's rated output of +37 dBm +20% using an antenna with 0 dBi gain.

MPE Evaluation

This is a Fixed device used in an **Uncontrolled** Exposure environment.

Limits Uncontrolled Exposure 47 CFR 1.1310 Table 1, (B)

| | |
|------------------|---|
| 0.3-1.234 MHz: | Limit [mW/cm ²] = 100 |
| 1.34-30 MHz: | Limit [mW/cm ²] = (180/f ²) |
| 30-300 MHz: | Limit [mW/cm ²] = 0.2 |
| 300-1500 MHz: | Limit [mW/cm ²] = f/1500 |
| 1500-100,000 MHz | Limit [mW/cm ²] = 1.0 |

Test Data

Uplink Output Power set to manufacturer's (Mfr) rated output power (+37 dBm) using an antenna with 0 dBi gain

| | |
|--------------------------|-------|
| Test Frequency, MHz | 817 |
| Power, Conducted, mW (P) | 5012 |
| Antenna Gain Isotropic | 0 dBi |
| Antenna Gain Numeric (G) | 1 |
| Distance (R) | 20 cm |

| | | | |
|--------------------------------------|--------------|------------------|-------------------------------|
| $S = \frac{P * G}{4\pi r^2}$ | | | |
| Power Density (S) mw/cm ² | Power mW (P) | Numeric Gain (G) | Distance (r ²) cm |
| 0.997 | 5012 | 1 | 20 |

| |
|--|
| Power Density (S) = 0.997 mw/cm ² |
| Limit =(from above table) = 0.545 mw/cm ² |

With the output power set to **manufacturer rated output power (+37 dBm)** using a 0 dBi antenna, the EUT does not meet the power density requirements at 20 cm, so the minimum safe distance was calculated below.

Minimum Safe Distance Evaluation

Test Data

Uplink Output Power set to manufacturer's (Mfr) rated output power (+37 dBm) using an antenna with 0 dBi gain

| | |
|--------------------------|-------|
| Test Frequency, MHz | 817 |
| Power, Mfr rated, mW (P) | 5012 |
| Antenna Gain Isotropic | 0 dBi |
| Antenna Gain Numeric (G) | 1 |
| Limit (L) | 0.545 |

| | | | |
|--------------------------|--------------|------------------|-----------|
| $R = \sqrt{(PG/4\pi L)}$ | | | |
| Distance (R) cm | Power mW (P) | Numeric Gain (G) | Limit (L) |
| 27.3 | 5012 | 1 | 0.537 |

With the output power set to the manufacturer's (Mfr) rated output power (+37 dBm) using an antenna with 0 dBi gain, the minimum safe distance is 27.3 cm.

MPE Evaluation

This is a Fixed device used in an **Uncontrolled** Exposure environment.

Limits Uncontrolled Exposure 47 CFR 1.1310 Table 1, (B)

| | |
|------------------|---|
| 0.3-1.234 MHz: | Limit [mW/cm ²] = 100 |
| 1.34-30 MHz: | Limit [mW/cm ²] = (180/f ²) |
| 30-300 MHz: | Limit [mW/cm ²] = 0.2 |
| 300-1500 MHz: | Limit [mW/cm ²] = f/1500 |
| 1500-100,000 MHz | Limit [mW/cm ²] = 1.0 |

Test Data

Uplink Output Power set to manufacturer's (Mfr) rated output power (+37 dBm) + 20 % using an antenna with 0 dBi gain

| | |
|--------------------------------|-------------------------|
| Test Frequency, MHz | 817 |
| Power, Mfr rated, mW (P) | 5012 |
| Power, Mfr rated + 20%, mW (P) | 6014.4 mw (5012 + 20%) |
| Antenna Gain Isotropic | 0 dBi |
| Antenna Gain Numeric (G) | 1 |
| Distance (R) | 20 cm |

| | | | |
|--------------------------------------|--------------|------------------|-------------------------------|
| $S = \frac{P * G}{4\pi r^2}$ | | | |
| Power Density (S) mw/cm ² | Power mW (P) | Numeric Gain (G) | Distance (r ²) cm |
| 1.20 | 6014.4 | 1 | 20 |

| |
|--|
| Power Density (S) = 1.20 mw/cm ² |
| Limit =(from above table) = 0.545 mw/cm ² |

With the Uplink output power set to **manufacturer rated output power (+37 dBm) + 20 %** using a 0 dBi antenna, the EUT does not meet the power density requirements at 20 cm, so the minimum safe distance was calculated below.

Minimum Safe Distance Evaluation

Test Data

Uplink Output Power set to manufacturer's (Mfr) rated output power (+37 dBm) + 20 % using an antenna with 0 dBi gain

| | |
|--------------------------------|-------------------------|
| Test Frequency, MHz | 817 |
| Power, Mfr rated, mW (P) | 5012 |
| Power, Mfr rated + 20%, mW (P) | 6014.4 mw (5012 + 20%) |
| Antenna Gain Isotropic | 0 dBi |
| Antenna Gain Numeric (G) | 1 |
| Limit (L) | 0.545 |

| | | | |
|--------------------------|--------------|------------------|-----------|
| $R = \sqrt{(PG/4\pi L)}$ | | | |
| Distance (R) cm | Power mW (P) | Numeric Gain (G) | Limit (L) |
| 29.9 | 6014.4 | 1 | 0.537 |

With the Uplink Output Power set to the manufacturer's (Mfr) rated output power (+37 dBm) + 20 % using an antenna with 0 dBi gain, the minimum safe distance is 29.9 cm.

END OF TEST REPORT
