RE: Aruba Networks

FCC ID: Q9DARUBA52

After a review of the submitted information, I have a few comments on the above referenced Application.

- 1) Because of the concerns noted regarding the sampling mode, it would be suggested to use method 3 with the peak detector/max hold/60 seconds method mentioned.
- 2) To continue with your response regarding your question to item 3, please clarify the following:

It appears that you used video averaging. Please clarify if the detector was set to peak, sample, or average with video averaging on during these measurements. Also, please confirm if the device was transmitting continuously or if there was a TX On/Off time occurring as could be implied by page 13 of 48 in the test report.

Timothy R. Johnson
Examining Engineer

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
