RE: Modular Approval Declaration FCC ID: Q9WIMBTC1PV10

To Whom It May Concern:

The following is to make declaration on the 8 requirements for FCC Modular Approval.

1. The module does have its own RF Shielding. This is the metal covering of the BlueCore chipset.
2. The module and its associated chipset do have buffered modulation/data inputs.
3. The module does have its own power supply regulation. A 3.3 Volt regulator is designed into the circuit to accept up to 5 Volts.
4. The SMA base module complies with the antenna requirements because it employs a "unique" antenna coupler between the module and the antenna.
5. The module can withstand testing in a stand alone environment. It does not need to be tested with the device it will be inserted to.
6. Upon approval for FCC, the module itself (not the outer case) will be visibly marked with our FCC ID number (FCC ID no: Q9WIMBTC1PV10). The modular transmitter will be labeled with its own FCC ID number, and, if the FCC ID is not visible when the module is installed inside another device, then, the outside of the device into which the module is installed will also display a label referring to the enclosed module. This exterior label will use wording such as the following: "Contains Transmitter Module FCC ID: Q9WIMBTC1PV10" or "contains FCC ID: Q9WIMBTC1PV10". Any similar wording that expresses the same meaning will be used. The Grantee will provide such a label, an example of which will be included in the application for equipment authorization.
7. There are no specific rules or requirements that apply to the transmitter.
8. We assure that all our products, to which the modules will be inserted, will have specific installation and operating instructions in their respected manuals to ensure the correct RF exposure limit.

Sincerely,

Woody Chiang
