

The Nomad 60 product uses the Silex SDMAC-2831S Bluetooth/WiFi module that has been certified by the FCC (FCC ID: N6C-SDMAC). We have performed all required testing of the module in the Nomad 60 product except antenna-port conducted emissions. Because the Nomad 60 product uses the module at a lower power level than what is declared in the FCC filing for the SDMAC-2831S, we are justified to re-use the SDMAC-2831S conducted emissions data.
