Subject: RE: Composite filings

Judy,
Are the units always used together? Can they ever be used separately or with another similar device? If they must always be used together or are permanently attached they are allowed to be submitted as a composite.
George

George,
These are 2 separate units, but are sold as a system because they work together. Does that still qualify?
Judy

Judy,
A composite device is a device which is in one enclosure but the device has more than one mode and operates under different equipment type codes. From the description provided it appears the device is a composite.

George,
Can I do a composite filing using 2 different Parts? We have a system (heart monitor) that is a Part 15 transmitter and the other part is Part 22. It uploads to a computer through phone or satellite.
Judy
