Finally you can begin controlling your wasted guestroom electricity expenses using the most efficient system of its kind. The Energy Eye^{TM} Sytem uses passive infrared and door/window contact sensor to control wasted energy costs by setting back a guestrrom's HVAC (Heating, Ventilation, Air Conditionig) to an optimized level while guests are away. The Energy Eye^{TM} System's components communicate using radio frequency (RF) technology to minimize installation and maintenance costs. Because each property has different needs, the Energy Eye^{TM} System allows for full customization of setbacks and timer settings that should be dertermined before installtion.
