SUBJECT : Statement requested by Part90.203(e)

“The transmitters designed to operate above 25MHz shall not be certified for use under this part if the operator can program and transmitter on frequencies, other than those programmed by the manufacturer.”

We, the undersigned, hereby confirm that the operator (user) CANNOT program and transmit on frequencies, other than those programmed by the manufacturer, because:

1. The user cannot access to RF components as a metal shield enclosure over them is soldered to the PCB.
2. The programming on frequencies is only probable by the software using a special external program tool.

If you have any questions, please do not hesitate to contact me.

Sincerely,

S. S. Lee Huyhee
