Hi Dennis

Please find responses below to your comments :

- 1) David Light has resent the internal photos
- 2) Label is attached to this email
- 3) You are correct that the basedesc.doc is the technical description and that is the file that needs to be confidential. The theory of operation does not need to be confidential
- 4),5),6) - these are addressed in the attached revised test report.

Hope this takes care of everything, let me know

Thanks for your help

Denise

Hi Denise

Here the latest request for information on the above ID. Please note that teh

ID on the 731 is QBWRZBasesch not as is listed in the subject line.

The reason for the late arrival of this request according to ATCB is an email problem. Thanks for asking about the device.

Thanks

Dennis Ward
