Re: Change from old Redline antenna part numbering scheme to new Redline/Alvarion antenna part numbering scheme

The following is the cross between different antennas. Each new Redline part number 48-xxxxx-yy calls up the supplier's antenna part number indicated by 48-xxxxx and the supplier's packaging information etc indicated by -yy separately. Therefore we are phasing out the old Redline part numbering scheme to replace it with a new Redline part numbering scheme.

Supplier's Antenna p/n	Old Redline antenna p/n	New Redline label antenna p/n	New Redline but no label antennas p/n	Alvarion label equivalent antenna p/n
