GENERAL REPORT SUMMARY

This electromagnetic emission report is generated by Compatible Electronics Inc., which is an independent testing and consulting firm. The test report is based on testing performed by Compatible Electronics personnel according to the measurement procedures described in the test specifications given below and in the "Test Procedures" section of this report.

The measurement data and conclusions appearing herein relate only to the sample tested and this report may not be reproduced in any form except in full, without the written permission of Compatible Electronics.

This report must not be used to claim product endorsement by NVLAP, NIST or any other agency of the U.S. Government.

Device Tested: Power Meter
Model: M0021501
S/N: None

Product Description: The EUT is an adapter that is capable of sensing the current/voltage on the Power Line. This device also supports both power-line and RF communication using the INSTEON Protocol

Modifications: The EUT was not modified during testing.

Manufacturer: Budderfly LLC
2 Trap Falls Road, Suite 507
Shelton, CT 06484

Test Date: May 11 & 15, September 25, 2013

Test Specifications: EMI requirements
CFR Title 47, Part 15 Subpart B sections 15.107 and 15.109, Subpart C Sections 15.205, 15.207, 15.209 and 15.249
Test Procedures: ANSI C63.4 and ANSI C63.10

SUMMARY OF TEST RESULTS

TEST	DESCRIPTION	RESULTS
1	Conducted RF Emissions, 150 kHz - 30 MHz.	Complies with the limits of CFR Title 47 Part 15 Subpart B Section 15.107, Subpart C Section 15.207
2	Radiated RF Emissions & Harmonics, 9 kHz – 10GHz.	Complies with the limits of CFR Title 47 Part 15 Subpart B Section 15.109 and Subpart C Section 15.205, 15.209
3	Fundamental Field Strength	Complies with CFR Title 47 Part 15 Subpart C Section 15.249(a)
4	Emissions Radiated Outside of the Fundamental Frequency Band	Complies with CFR Title 47 Part 15 Subpart C Section 15.249(d)
5	Voltage Variation	Complies with CFR Title 47 Part 15 Subpart C Section 15.31(e)

1. PURPOSE

This document is a qualification test report based on the Electromagnetic Interference (EMI) tests performed on the Power Meter Model: M0021501. The EMI measurements were performed according to the measurement procedure described in ANSI C63.10 and ANSI C63.4. The tests were performed in order to determine whether the electromagnetic emissions from the equipment under test, referred to as EUT (equipment under test) hereafter, are within the specification limits defined by the Code of Federal Regulations Title 47, Part 15 Subpart B 15.107 and 15.109, Subpart C sections 15.205, 15.207, 15.209 and 15.249. The power line carrier emissions tests were not performed by Compatible Electronics.

2. ADMINISTRATIVE DATA

2.1 Location of Testing

The EMI tests described herein were performed at the test facility of Compatible Electronics, 20621 Pascal Way, Lake Forest, California 92630.

2.2 Traceability Statement

The calibration certificates of all test equipment used during the test are on file at the location of the test. The calibration is traceable to the National Institute of Standards and Technology (NIST).

2.3 Cognizant Personnel

Budderfly LLC

Daniel Riscalla Vice President of Engineering

Compatible Electronics, Inc.

Matt Harrison Test Technician

Joey Madlangbayan Test Engineer

Josh Hansen Lab Manager

2.4 Date Test Sample was Received

The test sample was received on May 9, 2013.

2.5 Disposition of the Test Sample

The test sample has not been returned to Budderfly LLC as of the date of this report.

2.6 Abbreviations and Acronyms

The following abbreviations and acronyms may be used in this document.

RF	Radio Frequency
EMI	Electromagnetic Interference
EUT	Equipment Under Test
P/N	Part Number
S/N	Serial Number
HP	Hewlett Packard
ITE	Information Technology Equipment
CML	Corrected Meter Limit
LISN	Line Impedance Stabilization Network
NVLAP	National Voluntary Laboratory Accreditation Program
CFR	Code of Federal Regulations
PCB	Printed Circuit Board
TX	Transmit
RX	Receive

3. APPLICABLE DOCUMENTS

The following documents are referenced or used in the preparation of this EMI Test Report.

SPEC	TITLE
CFR Title 47, Part 15	FCC Rules – Radio frequency devices (including digital devices)
ANSI C63.4 2009	Methods of measurement of radio-noise emissions from low-voltage electrical and electronic equipment in the range of 9 kHz to 40 GHz.
ANSI C63.10: 2009	Methods of measurement of radio-noise emissions from low-voltage electrical and electronic equipment in the range of 9 kHz to 40 GHz

4. DESCRIPTION OF TEST CONFIGURATION

4.1 Description of Test Configuration - EMI

The EUT was tested in a tabletop configuration. The EUT was connected to a light fixture on the load side. The EUT was continuously Transceiving throughout the tests. All 3 axis were tested and the y axis was found to be the worst case.

The AC mains voltage was varied $\pm 15\%$ of the nominal voltage resulting with no variation of amplitude or frequency.

The highest emissions were found when the EUT was running in the above configuration. The cables were moved to maximize the emissions. The final radiated and conducted data was taken in this mode of operation. All initial investigations were performed with the spectrum analyzer in manual mode scanning the frequency range continuously. The cables were and routed as shown in the photographs in Appendix D.

4.1.1 Photograph of Test Configuration - EMI

4.1.2 Cable Construction and Termination

Cable 1

This is a 1-meter, unshielded, round cable connecting the EUT to the light fixture. The cable is hardwired at the EUT end as well as the light fixture end.

5. LISTS OF EUT, ACCESSORIES AND TEST EQUIPMENT**5.1 EUT and Accessory List**

6. TEST SITE DESCRIPTION**6.1 Test Facility Description**

Please refer to section 2.1 of this report for EMI test location.

6.2 EUT Mounting, Bonding and Grounding

The EUT was mounted on a 1.0 by 1.5 meter non-conductive table 0.8 meters above the ground plane.

The EUT was grounded through the power cord.

7. CHARACTERISTICS OF THE TRANSMITTER

7.1 Channel Number and Frequencies

There is only 1 channel.

1 = 915 MHz

7.2 Antenna

The antenna is made up of two 8cm wire antennas which are connected and soldered to the PCB.

8. TEST PROCEDURES

The following sections describe the test methods and the specifications for the tests. Test results are also included in this section.

8.1 RF Emissions

8.1.1 Conducted Emissions Test

The EMI receiver was used as a measuring meter. A quasi-peak and/or average reading was taken only where indicated in the data sheets. The LISN output was measured using the EMI receiver. The effective measurement bandwidth used for this test was 9 kHz.

Please see section 6.2 of this report for mounting, bonding, and grounding of the EUT. The EUT received its power through the LISN, which was bonded to the ground plane. The EUT was set up with the minimum distances from any conductive surfaces as specified in ANSI 63.4. The excess power cord was wrapped in a figure eight pattern to form a bundle not exceeding 0.4 meters in length.

The conducted emissions from the EUT were maximized for operating mode as well as cable placement. The final data was collected under program control by the computer software.

Test Results:

The EUT complies with the limits of CFR Title 47 Part 15 Subpart B section 15.107 and Subpart C section 15.207.

8.1.2 Radiated Emissions (Spurious and Harmonics) Test

The EMI receiver was used as a measuring meter. The receiver was used in the peak detect mode with the "Max Hold" feature activated. In this mode, the receiver records the highest measured reading over all the sweeps. Preamplifiers were used to increase the sensitivity of the instrument.

For spurious emissions the quasi-peak detector was used for frequencies below 1GHz and the average detector was used for frequencies above 1 GHz.

A duty cycle average was used for the harmonic emissions.

The measurement bandwidths and transducers used for the radiated emissions test were:

FREQUENCY RANGE (MHz)	TRANSDUCER	EFFECTIVE MEASUREMENT BANDWIDTH
.009 to .150	Active Loop Antenna	200 kHz
.150 to 30	Active Loop Antenna	9 kHz
30 to 1000	Combilog Antenna	100 kHz
1000 to 10000	Horn Antenna	1 MHz

The TDK FAC-3 shielded test chamber of Compatible Electronics, Inc. was used for radiated emissions testing. This test site is in full compliance with ANSI C63.10, ANSI C63.4, EN 50147-2, and CISPR 22. Please see section 6.2 of this report for mounting, bonding and grounding of the EUT. The turntable supporting the EUT is remote controlled using a motor. The turntable permits EUT rotation of 360 degrees in order to maximize emissions. Also, the antenna mast allows height variation of the antenna from 1 meter to 4 meters. Data was collected in the worst case (highest emission) configuration of the EUT. At each reading, the EUT was rotated 360 degrees and the antenna height was varied from 1 to 4 meters in both vertical and horizontal polarizations (for E field radiated field strength).

Test Results:

The EUT complies with the limits of CFR Title 47 Part 15 Subpart B 15.109, Subpart C sections 15.205, 15.209 and 15.249.

8.1.3 Fundamental Field Strength

The Peak Transmit EMI was measured using the EMI Receiver at a 3-meter test distance to obtain the final test data. The final qualification data sheets are located in Appendix E.

Test Results:

The EUT complies with Part 15 Subpart C, Section 15.249.

8.1.4 Emissions Radiated Outside of the Fundamental Frequency Band

The Band Edge measurement was measured using the EMI Receiver at a 3-meter test distance to obtain the final test data. The frequency was tuned to the lowest and highest frequency if the EUT transmits more than one frequency. The final qualification data sheets are located in Appendix E.

Test Results:

The EUT complies with Part 15 Subpart C, Section 15.205 and 15.249.

8.1.5 Voltage Fluctuations

Measurements of the variation of the radiated signal level of the fundamental frequency component of the emission was performed with the supply voltage varied between 85% and 115% of the nominal rated supply voltage.

Test Results:

The EUT complies with Part 15 Subpart C, Section 15.31(e).

8.1.6 Pulsed Operation Duty Cycle Correction

Duty Cycle Correction Factor = -11.11 dB

Number of Pulse #1 in 100ms = 36

Pulse #1 = 0.223ms * 36 = 8.03ms

Number of Pulse #2 in 100ms = 6

Pulse #2 = 0.335ms * 6 = 2.01ms

Number of Pulse #3 in 100ms = 79

Pulse #3 = 0.110ms * 79 = 8.69ms

Total time at 100% Amplitude = 18.73ms

Total Time at Reduced Amplitude = 16.71ms

Amplitude Difference between 100% and Reduced Amplitude = 5.28 dB

Effective ON Time of Reduced Amplitude = 9.09ms

Total Duty Cycle = 27.62ms / 100ms = 27.82%

Correction Factor - $20 * \log 0.2763 = -11.11$ dB

9. TEST PROCEDURE DEVIATIONS

There were no deviations from the test procedures.

10. CONCLUSIONS

The Power Meter Model: M0021501 meets all of the relevant specification requirements defined in the Code of Federal Regulations Title 47, Part 15 Subpart B sections 15.107 and 15.109, Subpart C sections 15.205, 15.207, 15.209 and 15.249. The power line carrier emissions tests were not performed by Compatible Electronics.

APPENDIX A

LABORATORY ACCREDITATIONS

LABORATORY ACCREDITATIONS AND RECOGNITIONS

For US, Canada, Australia/New Zealand, Taiwan and the European Union, Compatible Electronics is currently accredited by NVLAP to ISO/IEC 17025 and ISO 9002 equivalent. Please follow the link to the NIST site for each of our facilities NVLAP certificate and scope of accreditation.

Silverado/Lake Forest Division: <http://ts.nist.gov/ts/htdocs/210/214/scopes/2005270.htm>

Brea Division: <http://ts.nist.gov/ts/htdocs/210/214/scopes/2005280.htm>

Agoura Division: <http://ts.nist.gov/ts/htdocs/210/214/scopes/2000630.htm>

Compatible Electronics has been accredited by ANSI and appointed by the FCC to serve as a Telecommunications Certification Body (TCB). Compatible Electronics ANSI TCB listing can be found at: http://www.ansi.org/public/ca/ansi_cp.html

Compatible Electronics has been nominated as a Conformity Assessment Body (CAB) for EMC under the US/EU Mutual Recognition Agreement (MRA). Compatible Electronics NIST US/EU CAB listing can be found at: <http://ts.nist.gov/ts/htdocs/210/gsig/emc-cabs-mar02.pdf>

Compatible Electronics has been nominated as a Conformity Assessment Body (CAB) for Taiwan/BSMI under the US/APEC (Asia-Pacific Economic Cooperation) Mutual Recognition Agreement (MRA). Compatible Electronics NIST US/APEC CAB listing can be found at: <http://ts.nist.gov/ts/htdocs/210/gsig/apec/bsmi-cabs-may02.pdf>

Compatible Electronics has been validated by NEMKO against ISO/IEC 17025 under the NEMKO EMC Laboratory Authorization (ELA) program to all EN standards required by the European Union (EU) EMC Directive 89/336/EEC. Please follow the link to the Compatible Electronics' web site for each of our facilities NEMKO ELA certificate and scope of accreditation. <http://www.celectronics.com/certs.htm>

We are also certified/listed for IT products by the following country/agency:

Compatible Electronics VCCI listing can be found at:
http://www.vcci.or.jp/vcci_e/member/tekigo/setsubi_index_id.html

Just type "Compatible Electronics" into the Keyword search box.

Compatible Electronics FCC listing can be found at:
https://gulfoss2.fcc.gov/prod/oet/index_ie.html

Just type "Compatible Electronics" into the Test Firms search box.

Compatible Electronics IC listing can be found at:
http://spectrum.ic.gc.ca/~cert/labs/oats_lab_c_e.html

APPENDIX B

MODIFICATIONS TO THE EUT

MODIFICATIONS TO THE EUT

There were no modifications made to the EUT during testing.

APPENDIX D

DIAGRAMS, CHARTS AND PHOTOS

The diagram illustrates the test setup for measuring emissions from an Accessory Equipment (ACC) and a User Equipment (EUT) connected to a power source. The setup includes a wooden test bench (1x1.5 meters) and a screen wall. The EUT is positioned 80 cm away from the LISNs, and the rear of the table is 40 cm from the wall. The diagram shows the following components and connections:

- ACC LISN**: Connected to the power source and the ACC.
- EUT LISN**: Connected to the power source and the EUT.
- ACC**: Accessory Equipment, connected to the ACC LISN.
- EUT**: User Equipment, connected to the EUT LISN.
- Wooden Test Bench (1x1.5 meters)**: The equipment is placed on this bench.
- SCREEN WALL**: Positioned behind the test bench.
- 80 cm**: The distance between the EUT and the LISNs.
- 40 cm**: The distance from the rear of the table to the wall.
- ACCESSORY POWER**: The power source for the ACC LISN.
- EUT POWER**: The power source for the EUT LISN.
- TO EMI RECEIVER**: The signal path from the LISNs to the EMI receiver.

DUTY CYCLE

Pulse Train

Time of Pulse with Blanking Interval = >100ms

Time of One Pulse Train = 35.44ms

DUTY CYCLE

PULSE #1 WIDTH

Pulse #1 width = 0.223ms

DUTY CYCLE

PULSE #2 WIDTH

Pulse #2 width = 0.335ms

DUTY CYCLE PULSE #3 WIDTH

Pulse width = 0.110ms

DUTY CYCLE

Amplitude Difference

Minimum Level for 100% Amplitude and Maximum Level for Reduced Amplitude Delta = -5.28dB

DUTY CYCLE

Calculation

Number of Pulse #1 in 100ms = 36

*Pulse #1 = 0.223ms * 36 = 8.03ms*

Number of Pulse #2 in 100ms = 6

*Pulse #2 = 0.335ms * 6 = 2.01ms*

Number of Pulse #3 in 100ms = 79

*Pulse #3 = 0.110ms * 79 = 8.69ms*

Total time at 100% Amplitude = 18.73ms

Total Time at Reduced Amplitude = 16.71ms

Amplitude Difference between 100% and Reduced Amplitude = 5.28 dB

Effective ON Time of Reduced Amplitude = 9.09ms

Total Duty Cycle = 27.62ms / 100ms = 27.82%

Correction Factor - $20 * \log 0.2763 = -11.11$
