

2. Photograph for the test configuration

3. Sample Calculation

The emission level measured in decibels above one microvolt (dB_{μV}) was converted into microvolt (μV) as shown in following sample calculation.

For example :

	Measured Value at	0.382 MHz	19.3 dB	@ average mode
+	Cable Losses *		0.0 dB	
=	Conducted Emission		19.3 dB	
			(= 9.2 μV)	

* In case of RG214/ RF cable 15 Ft, the loss is about 0.17 dB at the frequency of 30 MHz which is negligible.
