

# Co-Pilot Instructions

1. Open cradle by depressing button on lower left-hand side of cradle. Right side of cradle will pop open. Place cellular phone in cradle. Close right side of cradle until contact is made to phone and a clicking sound is heard.  
Once click is heard, Do Not continue to press cradle.
2. Place the extension arm into the power source (cigarette lighter).
3. Adjust the extension arm for comfortable placement.  
*Note: The extension arm has two wing nuts that can be loosened to adjust placement of the unit (right to left) and top to bottom.*
4. Place the audio cup over the cellular phone ear piece.
5. Choose and set the frequency channel of 96.1 MHz on the car stereo memory. (If channel cannot be found through auto search, please search manually)
6. When calls come in and/or when dialing out, whether the driver is currently listening to another station, cassette tape or CD, simply return to channel 96.1 FM and conversations can be heard directly through the car stereo system.

## Special Points

- For a clearer sound, please preset the volume tone on your cellular phone to the highest possible level.
- This product is based on "Activation By Sound." When using this product, please Do Not program your cellular phone to "vibrate" or to the "keypad without sound" function.
- Best suggested level of volume set on stereo is mid-high. The higher the volume, the higher the possibility of causing a double sided echo effect.
- Please minimize the bass on the stereo as increased bass levels will cause sound shaking effects. (Reconstructed engine and/or exhaust pipe with higher noise pollution may also cause the same effects.)

\* Warning : Changes of Modifications to this unit not expressly approved by the party responsible for compliance could void the user 's authority to operate the equipment

\* This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation
