

Formal Request for an extension of time

Re: FCC ID: QDJ-0302AMD01  
TC910900

We hereby request an additional 30 days extension to provide technical information to TC 910900. We were just informed by our client that this device can operate GPRS in two timeslots. According to your request for more information, you requested SAR data for two timeslots if it transmits in two timeslots. As you require, the response is due this week but the only SIM chip that exists is on its way to your facility in the requested sample audit. We are unable to start new testing at this time until we receive an additional SIM chip.

The initial response is due on June 7, 2003 as per your letter of May 7, 2003, reference number: 8203. Please keep this application in audit mode and we will submit the answers as soon as possible. Thank you for your kind help!

An extension should be ok. Please respond to the RT with your formal request.

Dear Mr. Martin Perinne

Regarding TC 910900, ChiMei portable, We were just informed by our client that this device can operate GPRS in two timeslots. According to your request for more information, you requested SAR data for two timeslots if it transmits in two timeslots. As you require, the response is due this week but the only SIM chip that exists is on its way to your facility in the requested sample audit. We are unable to start new testing at this time until we receive an additional SIM chip. May I request for an extension of time and if it is not possible to grant an extension then I would ask if the commission would conditionally grant and we subsequently add the two timeslot GPRS with a PCII.

Please advice.
