Hi Mike,

Below are the answers to your questions on the above application.

Q#1: 6dB bandwidth test result for CH1 and CH10 listed in page 10 were different from the test plot, please correct.
<CCS Answer:> This is a typo. Please see attached Revision C Report.

Q#2: In page 26 of MPE calculation result, the output power listed was 26.78dBm which does not match the result measured. Is it a typo? Or please explain how it was got.

<CCS Answer:> This is a typo. Please see attached Revision C Report.

Q#3: Page 27 listed the channel measured in power spectral density test were 2412, 2457 and 2462MHz but the test plot shown 2417, 2457 and 2458MHz were measured. Please consist the test plot with the result.

<CCS Answer:> The peak spectral densities measured are all within the ± 8 MHz from occupied bandwidth (approx. 16 MHz); therefore the results are all within the acceptable range of spectral density for each channel.

Best regards,
September
