

**PointRed Base Station Transmitter  
Class 2 Permissive Change Request**

FCC ID: QDU-MCRD-BASE-2R5  
Original Grant: 25 June 2002

Two changes have been made to the original equipment:

- a) A new case has been designed for the outdoor radio transceiver unit.
- b) The low pass filter at the antenna port has been improved.

The low pass filter modification was effected by changing the etch shape on the foil side of the pcb. A drawing of the change is presented as a separate attachment. There were no changes to the schematic.

The nature of the change requires that only radiated emissions testing be performed to determine continuing compliance.
