Electrical Characteristics

Symbol	Parameter	Test Conditions		Min.	Typ.	Max.	Unit
		V_{DD}	Conditions				
V_{DD}	Operating Voltage	—	V_{DD} pad voltage	2.4	—	6.5	V
I_{dd}	Operating Current	3V	—	—	4	—	μA
		5V	Voltage limiter not started	—	10	—	μA
R_m	Modulation Resistance	5V	—	—	320	—	Ω
V_{LCL}	LC Input Limiter Voltage	—	—	—	6.5	—	V
B_R	Output Data Baud Rate	3V	V_{DD} vs V_{SS}	—	4	—	Kbps
		5V	V_{DD} vs V_{SS}	—	5.5	—	Kbps

Functional Description

Operation Concept

The reader transmits a 13.56MHz carrier signal from its antenna, the LC tank on the transponder side converts the carrier energy to voltage form and supply to the transponder chip with an internal pump circuit. If the induced energy is high enough, the pumped voltage reaches the break-in voltage of the internal RC-oscillator, the transponder is actuated to transmit its internal data serially by means of damping the LC tank.

The reader receiving the transponder's data by means of detecting the energy variation on its own antenna, and recognize the information with a microcontroller.

The HT6720 has a built-in internal Voltage Limiter to prevent excess power supply and RF levels induced by the LC tank from damaging the device or causing the device to function abnormally.

A total of 96 bits of OTP memory space is provided, from which 64 bits wide are customer programmable, which can be programmed using the specified programmer supplied by Holtek. The pre-programmed ICs are also available upon customer's request.
