

TEL-TRON *Companion One*[®]

Pendants

Wireless Series

Description

Tel-Tron wireless pendants allow for wireless activation of an emergency call from anywhere within a resident's apartment or common area. These transmitters can be used within a full wireless system or as an added feature to a Direct Connect system.

Wireless Pendants, when activated, send a signal to either a WRMA wireless receiver on a wireless system or a WARB wireless receiver on a Direct Connect system.

The **WATC Wireless Pendant** is activated by pressing the pushbutton. The WATC Pendant is placed around the resident's neck using the safety lanyard, which breaks under pressure to prevent choking.

The **WATC-W Wriststrap** is an adjustable wriststrap accessory for the WATC which was specifically designed for resident comfort.
