Hi Alice,

I received therevised manual - thank you. Below are RT questions from the reviewing engineer. Once these are answered it should be ready to go. Thanks.

1. What is the intended use of the EUT? What is its fundamental frequency?
2. There were no emissions whatsoever from the EUT detected. There was no fundamental emission detected (or reported). Was the EUT actually operating correctly?
3. Were input signals adjusted to obtain the maximum emissions?
