SUBJECT: MAGICEYES DIGITAL COMPANY FCC ID: QENMKIVKI

REFERENCE: JOB #:588KC2

FCC Section 15.017: Conducted Limits

Per the enclosed Test Report, the customer reports EUT fluctuations at the 48 dB limit as is displayed in the submitted Figure 1 and Figure 2 plots. He then reports investigating those worst-case emissions which appear at about 4 MHz on the plot. Table 2 Test Data is a record of the data at those frequencies of worst-case emissions using CISPR quasi-peak mode measurements. The EUT does comply with the 48dB limit at those frequencies as shown in the submitted Test Data Table 2.

Sincerely,  
Frank (for)

Sid Sanders
