

## MACINTOSH OS 9.04 AND HIGHER

### INSTALLATION:

### TROUBLESHOOTING

Install the product by plugging it into an available USB port.

**Note:** If a USB keyboard is being used, make sure that the keyboard is plugged into USB port number 1.

1. Plug the USB connector into an available USB port on your computer or USB compatible keyboard.
2. You must specify the input device to your computer. Click the Apple menu and choose. Control Panels, Sound to activate the sound option window.

1. Check that your USB keyboard is plugged into port number 1 only.
2. Verify that your operating system is OS 9.04 greater. Operating systems below OS 9.04 do support this device.
3. Check that USB audio is selected as your input device. Follow the Mac installation instructions in this manual.
4. Check the volume level as described in the previous section.
5. For more information, visit [www.tnccglobalssystem.com](http://www.tnccglobalssystem.com)
