

NOKIA Devices / Copenhagen

08/09/2008

RE-USE OF TEST RESULTS:

Test reports provided with this filing make reuse of results of Nokia product with FCC-ID "QFXRM-349".

Main differences between the products:

WCDMA functionality removed from RF and Base Band: The WCDMA components have been removed from the PWB. All removed WCDMA components were under a shield, which have been left in the design. Therefore, the "radiating box" has the same electrical outlines and shape.

SW is configured to support GSM bands only

The WLAN feature has been removed by not placing the WLAN chip and related components. The Bluetooth RF output has been re-routed.

Proposed conclusion:

Re-use of test results possible. Only tests dealing with absolute BT RF levels were done (covered by test report Tre_FCC_0827_09).

FCC ID: QFXRM-349
ICID: 661Z-RM349
