June 20, 2002

IPT would request that any information contained in the: Theory of Operation, Schematic, and block diagram be kept in a confidential manner. The audio circuits and control circuits are designed to provide operational characteristics of the transmitter that exceed our competitor's transmitters. We have invested a large amount of time and money to develop this transmitter in a very competitive market. This transmitter sets us apart from the competition in function and design – namely with the three audio inputs, automatic audio switching, available control functions, and Lithium Ion Battery / charge circuit. There would be substantial harm to our business if our competition had available the Theory, Schematic or block diagram.

Larry Sharp
Director of Engineering, CTO
International Police Technologies
