RE: FCC ID: QHOHPN1600

Attention: Denise Godfrey

I have a few comments on this Application.

- 1 TNE devices are classically hand held to the ear. While this appears to be hand held, it does not appear to be able to be held to the ear. The manual states that the hands free kit is to be plugged in before the call is made. However, this does not say that this device is NOT capable of being held to the ear during a phone call. Please unambiguously state if this device can or cannot be operated being held to the ear. If this device can be operated held to the ear, please provide SAR measurements under the head position criteria.
- 2 If this device cannot be operated by being held to the ear, please revise the manual, SAR and EMC report to so state that it is not possible. Please explain how the device is prevents this operation.

A handwritten signature in black ink that reads "Dennis Ward".

Dennis Ward
