REPORT SUMMARY

RF Exposure Assessment of the
Laerdal Medical AS
Little Anne QCPR Sensor

Product Service

1.1 INTRODUCTION

The information contained in this report is intended to show verification of the RF Exposure Assessment of the Laerdal Medical AS Little Anne QCPR Sensor to the requirements of the applied test specifications.

Objective	To perform RF Exposure Assessment to determine the Equipment Under Test's (EUT's) compliance of the applied rules.
Applicant	Laerdal Medical AS
Manufacturer	Laerdal Medical AS
Manufacturing Description	The purpose of the Little Anne QCPR Sensor is to provide the user with objective measurements and quality feedback on CPR when training on Little Anne. The feedback will be presented to the user on a smartphone application (Ref. URS-1022)
Hardware Version	REV A Prototype
Model Number(s)	Little Anne QCPR Sensor
Test Specification/Issue/Date	EN 62311:2008 CFR 47 Pt1.1310 Health Canada Safety Code 6 ARPANSA Radiation Protection Series No.3

1.3 PRODUCT INFORMATION

1.3.1 Technical Description

The Equipment under test was a Laerdal Medical AS Little Anne QCPR Sensor. The purpose of the Little Anne QCPR Sensor is to provide the user with objective measurements and quality feedback on CPR when training on Little Anne. The feedback will be presented to the user on a smartphone application (Ref. URS-1022). A full technical description can be found in the manufacturer's documentation.

All reported calculations were carried out on the relevant information supplied for the Little Anne QCPR Sensor to demonstrate compliance with the applied test specification(s). The sample assessed was found to comply with the requirements of the applied rules.

1.3.2 Supported Features

The following radio access technologies and frequency bands are supported by the equipment under test.

Radio Access Technology	Bluetooth Low Energy
Frequency Band	2402 MHz to 2480 MHz

1.3.3 Antennas

The following antennas are supported by the equipment under test.

No.	Model	Gain (dBi)
1	Internal	0

1.4 BRIEF SUMMARY OF RESULTS

The wireless device described within this report has been shown to be capable of compliance with the basic restrictions related to human exposure to electromagnetic fields for both General Public and Occupational. The calculations shown in this report were made in accordance the procedures specified in the applied test specification(s).

Required Compliance Boundary (m)	
Occupational	General Population
0.01	0.01

2.1 RATIONALE FOR ASSESSMENT OF THE RF EXPOSURE

The aim of the assessment report is to evaluate the compliance boundary for a set of given input power(s) according to the basic restrictions (directly or indirectly via compliance with reference levels) related to human exposure to radio frequency electromagnetic fields.

The chosen assessment method to establish the compliance boundary in the far-field region is the reference method as defined in the relevant specifications.

The RF exposure assessment is based upon the following criteria:

The Little Anne QCPR Sensor The purpose of the Little Anne QCPR Sensor is to provide the user with objective measurements and quality feedback on CPR when training on Little Anne. The feedback will be presented to the user on a smartphone application (Ref. URS-1022) operates with the following transmitters active on the antenna ports shown in Section 1.3.3. For each transmitter, the Radio Access Technology (RAT), EIRP inclusive of antenna gain and duty cycle, gain of the antenna and lowest frequency of operation are shown as they contribute to the calculation of S Field, E field and H field values according to the following formulas.

The power flux (S Field):

$$S = \frac{PG_{(\theta, \phi)}}{4\pi r^2}$$

The electric field strength (E Field):

$$E = \frac{\sqrt{30PG_{(\theta, \phi)}}}{r}$$

The magnetic field strength (H Field):

$$H = \frac{E}{\eta_0}$$

Where:

P = Average Power (W)

G = Antenna Gain (dBi)

r = Distance (cm) or (m)

$\eta_0 = 377$
