guidelines**

Safety

This appendix contains specifications for CommScope ONECELL, including FCC information and technical data.

Radiation Exposure Statement	A-2
Human exposure limits for ONECELL deployments	A-2
FCC ID	A-6

Radiation Exposure Statement

Important: Changes or modifications not expressly approved by CommScope LLC could void your authority to operate the equipment.

FCC Part 15

The Baseband Controller and RP5100 have been tested and found to comply with the limits for Class A equipment, pursuant to Part 15 of the FCC Rules.

NOTE

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

For more information, see the publication femtocells and Health at [http:// www.femtoforum.org](http://www.femtoforum.org) or visit the FCC website at www.fcc.gov.

EN55032

WARNING

This equipment is compliant with Class A of EN55032. In a residential environment, this equipment may cause radio interference.

Human exposure limits for ONECELL deployments

The human exposure limits for the ONECELL product is calculated by using the Maximum Permissible Exposure (MPE) method associated with fixed-type transmitter devices at a minimum exposure distance of 20 cm.

WARNING

This equipment is not suitable for use in locations where children are likely to be present.

Table A-1 includes values for one Radio Point (RP5000 series) and four Radio Points per chassis.

Table A-1. RF exposure for ONECELL at maximum power internal antennas for RP5000 series

Parameter	RPM-A5A11-B66	RPM-A5A11-B02	RPM-I5A11-B01	RPM-I5A11-B03	RPM-I5A11-B07
Tx Power (dBm) per antenna	24.13	24.23	24.25	24.00	24.70
Tx Loss (dB)	0	0	0	0	0

FCC ID

The FCC ID is available on the information labels attached to the RPs.

RP5100 series

For the RP5100i, the FCC ID for each of the installed radio modules is visible when the cover is removed. The drawing below shows the label on the radio module.

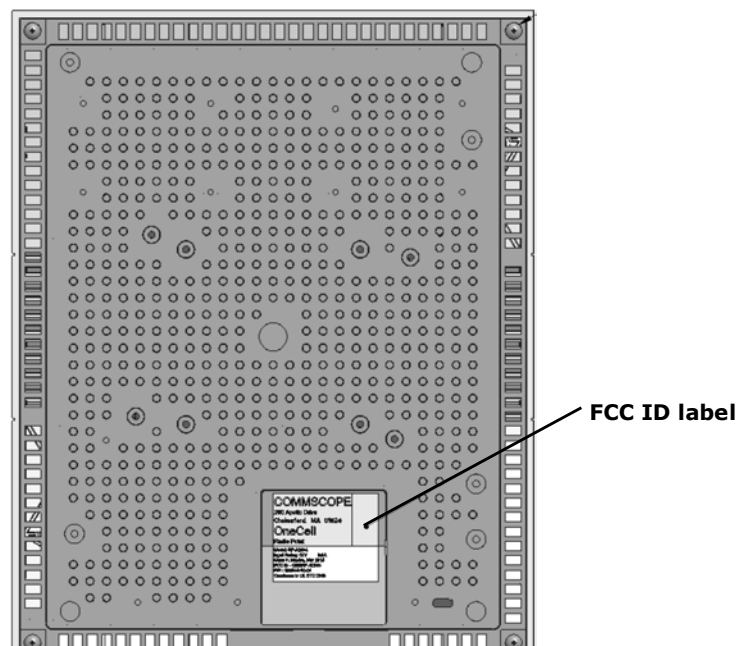

The RP5100r FCC ID is on the label located on the side of device as shown in the drawing below.

RP2000 series

The RP2000 FCC ID is on the label located on the back of the device as shown in the drawing below.

Installation troubleshooting

This section contains information on troubleshooting the ONECELL installation. It includes the LED patterns for the Baseband Controller and Radio points.

Baseband Controller LED patterns	B-2
Radio Point LED patterns	B-4

Baseband Controller LED patterns

The Baseband Controller has four LEDs on the front panel. The following table shows

- Display pattern for each LED
- What the pattern indicates
- Action to take, if any, to resolve the issue

LED	Display Pattern	Indicates	Action to Take
STATUS	Green, solid	Power On Sectors up	None
	Amber, solid	Self-test failure	Replace Baseband Controller
	Green, blinking	Firmware upgrade from DMS Sectors not up	None
	Amber, blinking	No configuration from DMS	<ul style="list-style-type: none"> • Check DMS availability • Check if the provisioning is correct • Escalate to operator
	OFF	BC rebooting after upgrade	None
	Red, solid*	Error in system - software or hardware issues detected	Replace Baseband Controller Module
RP ERROR	Green, solid	Power On	None
	Amber, solid	Self-test failure	Replace Baseband Controller
	Amber, blinking	No Radio Points connected	Check RP cable
	Off	Radio Points connected, firmware upgrade from DMS	None
	Red, blinking	Radio Point alarm - PLL state unlock; service impacting alarm from Radio Point (alarm in one or more RP)	Check 1588 VLAN configuration

LED	Display Pattern	Indicates	Action to Take
TIMING LED	Green, solid	Power On, timing	None
	Amber, solid	Self-test failure	Replace Baseband Controller
	Amber, blinking	No timing	Check GPS antenna connection feed
	Off	Firmware upgrade from DMS	None
	Red, solid*	Error in system GPS module down Software/Hardware issues	Replace Baseband Controller Module
CORE LED	Green, solid	Power On Connection to MME	None
	Amber, solid	Self-test failure	Replace Baseband Controller
	Amber, blinking	No connection to MME IPsec is up	<ul style="list-style-type: none"> Check the MME configuration on the BC Check if MME is reachable
	Off	Firmware upgrade from DMS	None
	Red, blinking	Internet connection IPsec down	<ul style="list-style-type: none"> Check if Security Gateway is reachable Check security credentials
	Red, solid*	No Internet Interface hardware issues	Replace Baseband Controller Module
* Note: When all of the LEDs are solid red, there is a BC hardware failure.			

Radio Point LED patterns

This section contains LED patterns for RP5100 series and RP2000 series.

RP5100i LED patterns

The Radio Point RP5100i supports six LEDs on the front cover.

Indicators are for

- four radios (one for each)
- ETH 1 – MR PORT:POE++, POE+, Ethernet link
- ETH 2– SR PORT:POE++, POE+, Ethernet link

The following table shows:

- Display pattern for each LED
- What the pattern indicates
- Action to take, if any, to resolve the issue

LED	Display Pattern	Indicates	Action to Take
RADIO 1	Green, solid	Power On, transmitting	None
RADIO 2	Amber, solid	<ul style="list-style-type: none"> • RFTxState OFF • No Controller Assigned • No Timing 	<ul style="list-style-type: none"> • Check 1588 VLAN configuration • Verify that the Radio Point is in STANDBY because more than 32 RPs are connected
RADIO 3		<ul style="list-style-type: none"> • No connection to Controller • HW error • Low Power 	Hardware error – replace Radio Point
RADIO 4	Green, blinking	Firmware upgrade	None
	Amber, blinking	RF module Self-Test Failure	Replace Radio Module
Eth 1	Green, solid	Power On, PoE++ power	None
	Amber, solid	Link up, no power	Check that the Ethernet cable is connected to the Radio Point
	Green, blinking	PoE+ power	None
	Amber, blinking	Platform Self-Test Failure	Replace Radio Point
	Red, solid	Ethernet port error	<ul style="list-style-type: none"> • Connect the Ethernet cable between the Baseband Controller and Radio Point • Replace Radio Point
Eth 2	Green, solid	Power On, PoE++ power	None
	Amber, solid	Link up, no power	Check that the Ethernet cable is connected to the Radio Point
	Green, blinking	PoE+ power	None
	Amber, blinking	Platform Self-Test Failure	Replace Radio Point
	Red, solid	Ethernet port error	<ul style="list-style-type: none"> • Connect the Ethernet cable between the Baseband Controller and Radio Point • Replace Radio Point
* Note: When all of the LEDs are solid red, there is an RP hardware failure.			

RP5100r LED patterns

The Radio Point RP5100r has one LED. The following table includes the LED patterns.

Display Pattern	Indicates	Action to Take
Green, blinking	<ul style="list-style-type: none">Not all available radio modules are in useRFTx ON for all radio modules	No action required
Green, solid	<ul style="list-style-type: none">All available radio modules are in useRFTx ON for all radio modules	No action required
Red, solid	Error in the system. <ul style="list-style-type: none">No module connected to the BCAll modules have low power	Replace Radio Point
Red, blinking	No modules in use Note: The radio modules may be connected to the BC.	<ul style="list-style-type: none">Check the connection between the RP and BC.Check that the BC admin status is UP.
Green, fast blinking	Software upgrade	No action required

RP2000 series LED patterns

The RP2000 and RP2100 Radio Points have one LED. The LED for the RP2000 (Indoor) is on the front cover. The LED for the RP2100 (Rugged) is on the bottom of the Radio Point where the Ethernet cable port is located. The following table shows:

- Display pattern for each LED
- What the pattern indicates
- Action to take, if any, to resolve the issue

LED	Display Pattern	Indicates	Action to Take
STATUS	Green, solid	Power On RFTx state is ON	None
	Amber, solid	Self-test failure	Replace RP
	Green, blinking	Firmware upgrade Connected to Baseband Controller	None
	Amber, blinking	PLL state – unlock RFTx state – OFF or suspended L2 path verification failed Admin state – STANDBY	<ul style="list-style-type: none"> • Check 1588 VLAN configuration • Verify RP is in STANDBY because more than 32 Radio Points are connected to the same Baseband Controller
	Red, blinking	No connection to Baseband Controller (http)	<ul style="list-style-type: none"> • Connect the Ethernet cable between the Baseband Controller and Radio Point • Replace RP
	Red, solid	Error in system – software or hardware issues Interface issues detected AdminState – UNLOCKED	<ul style="list-style-type: none"> • Connect the Ethernet cable between the Baseband Controller and Radio Point • Upgrade Radio Point • Replace Radio Point

Specifications

This appendix contains specifications for CommScope ONECELL, including FCC information and technical data.

Environmental and physical specifications	C-1
SPF/SPF+ specifications	C-3

Environmental and physical specifications

The following table lists the electrical ratings and technical data for the Baseband Controller, RP5100 series and RP2000/RP2100.

Table C-1. Environmental and Physical specifications

Baseband Controller	
Environmental	Operating Temperatures: 0°C to 40°C Operating Humidity 10%-90% Non-Condensing
Power Requirements	120/230 VAC, 1.7/0.85 A, 50/60 Hz
Power Consumption	204W Typical / 216W Maximum
Dimensions	1 Rack Unit Chassis hosts 2 Baseband Controller module units 19" W x 1.75" H x 18.8" D (483mm W x 44.4mm H x 477mm D)
Weight	Single BC 13.1 lbs (5.9 kg) Dual BC 19.1 lbs. (8.7 kg)
RP5100i	

Table C-1. Environmental and Physical specifications (continued)

Environmental	Operating Temperatures: 0 to 50°C (Plenum rated: UL-2043) Operating Humidity 10%-95% Non-Condensing Operating temperatures: 0°C to 50°C Active Cooling/Fans, acoustic noise: 39.5 dBA at 25C
Power Requirements	IEEE802.3bt-type 4 PoE++
Power Consumption	Up to: 72W (26W + 11.5W per RM)
Dimensions	13.54" W x 13.54 H x 3.35" D (344.0 mm W x 344.0 mm H x 85.0 mm D)
Weight	8.82 lbs (4 kg)
RP5100r	
Environmental	Operating Temperatures: 0 to 50°C (Plenum rated: UL-2043) Operating Humidity 10%-95% Non-Condensing Operating temperatures: 0°C to 50°C Active Cooling/Fans, acoustic noise: 39.5 dBA at 25C
Power Requirements	IEEE802.3bt-type4 PoE++
Power Consumption	Up to: 72W (26W + 11.5W per RM)
Dimensions	14.9" W x 12.64" H x 4.06" D (378.7 mm W x 321.1 mm H x 102.5 mm D)
Weight	21.7 lbs (9.85 kg)
RP2000	
Environmental	Operating Temperatures: 0°C to 50°C (Plenum rated: UL-2043) Operating Humidity: 10%-95% Non-Condensing
Power Requirements	802.3at PoE+
Power Consumption	22W Typical / 25.5W Maximum
Dimensions	7.4" W x 9.25" H x 1.75" D (188mm W x 235mm H x 45mm D)
Weight	2.6 lbs (1.2 kg)
RP2100	
Environmental	Operating Temperatures: -40C to 60°C
Power Requirements	802.3at PoE+
Power Consumption	22W Typical / 25.5W Maximum

Table C-1. Environmental and Physical specifications (*continued*)

Dimensions	9.3" W x 9.1" H x 3.0" D (236mm W x 230mm H x 76mm D)
Weight	8 lbs (0.6 kg)

SPF/SPF+ specifications

The following table lists the SPF and SPF+ specifications required for the Baseband Controller.

1G SFP LC SX Transceiver; 220M to 1K M
1G SFP LC LX transceiver, 550M 10K M
10G SFP+ LC SR Transceiver; Multi mode 26M to 300M
SFP-10G-LR Transceiver; Single mode 10KM
10G Direct attach SFP+ cable; Twin ax Cable; 7M (must be compatible with HP & Cisco switches)

Field Replaceable Units

This appendix contains instructions for replacing Baseband Controller modules and Radio Points in the ONECELL system.

FRU overview	D-2
Replacing Baseband Controller modules	D-2
Replacing RP5100 series Radio Points	D-16
Replacing RP5100i RF modules	D-47
Replacing RP2000 series Radio Points	D-52
RP post-replacement verification	D-85

FRU overview

Field Replaceable Units (FRUs) are modules that can be replaced on-site in case of equipment failure. On-site and off-site activities are required when replacing modules. The off-site activities are achieved by using DMS.

This appendix contains details for replacing Baseband Controller (BC) modules and Radio Points (RP).

Replacing Baseband Controller modules

The following procedure provides instructions for replacing the ONECELL Baseband Controller (BC) module in a live network environment.

This procedure is divided into four sections:

- [Prerequisites](#)
- [Off-site activities](#)
- [On-site activities](#)
- [Post-Install Verification](#)

Prerequisites

The following table contains a checklist of prerequisites for replacing a BC.

Step	Prerequisite	Completed
1	UDEF file for DMS import	
2	SSH password	
3	Replacement ONECELL BC module	
4	Laptop for Web GUI access	
5	Config.tar file containing operator information Note: This file should be saved on the Laptop that will be used for WebGUI access.	
6	License file (if applicable) Note: This file should be saved on the Laptop that will be used for WebGUI access.	

Step	Prerequisite	Completed
7	Configuration details for WebGUI commissioning Note: These parameters are derived from the failed unit being replaced.	
8	Ethernet cable Note: Required for connecting the laptop to the ONECELL Baseband Controller Management port	
9	DMS FTP IP address	

Off-site activities

Before replacing the BC module, import a new EDF file to the DMS. This file contains the BC MAC address and HeMs password specific to the new BC.

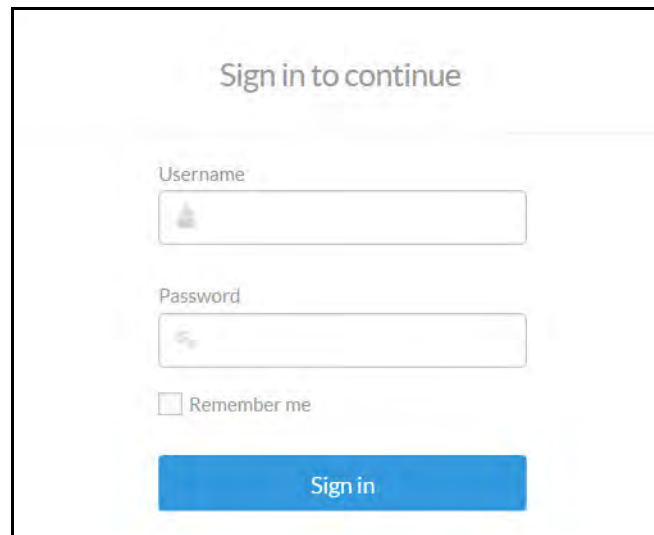

- 1 Access the FTP location on DMS using ftp protocol, port 2100.
- 2 Upload the EDF file to `/appdata/dms/import/factory`.
- 3 Access the DMS Network console from a supported Web Browser.

NOTE: The DMS GUI supports Microsoft Edge 81 and later, Google Chrome 81 and later, and Mozilla Firefox Quantum 68 and later.

- 4 Enter the IP address for the Network Management portal.

`http://<IP Address DMS server>/networkconsole`

The Sign In dialog box displays.

The image shows a 'Sign in to continue' dialog box. It has a title 'Sign in to continue' at the top. Below the title, there are two input fields: 'Username' and 'Password'. The 'Username' field has a small icon of a person. The 'Password' field has a small icon of a key. Below the password field, there is a checkbox labeled 'Remember me'. At the bottom of the dialog box, there is a blue button labeled 'Sign in'.

- 5 Enter Username and Password. The Search Device screen displays.

- 6** Enter the device Mac ID.

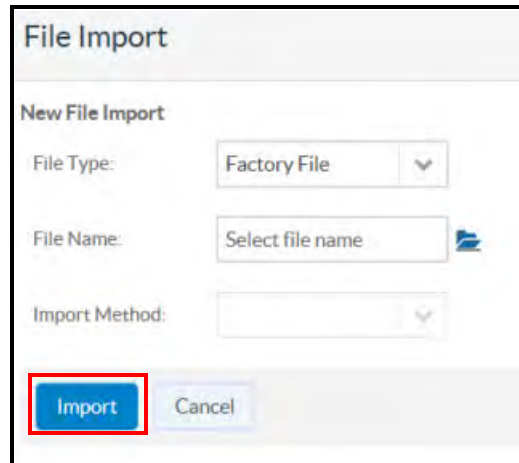

The Network Management Portal opens.

- 7** Select Import tab located in the left margin of the Device console.

- 8** Select File Import.

- 9** Browse and select the desired import file. The EDF file format is xml.

- 10** Click **Import**.

- 11** Click **Import Progress**. Wait for the import to be completed.

Import Progress							
File Type	Operation/File Name	Import Method	Start time	End time	Import Status		Devices Impacted
File Import	uedf-factory-NW-0005B9A10_Sim_CU.xml	FACTORY	2015-05-19 18:49:11 IST		In Progress		View Details

13 Login to the Device console.

A login form titled "Sign in to continue". It contains two input fields: "Username" with a person icon and "Password" with a key icon. Below the password field is a checkbox labeled "Remember me". At the bottom is a blue button labeled "Sign in".

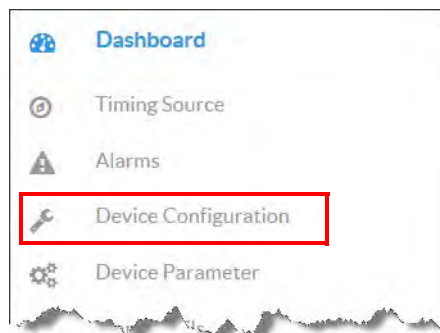

14 Enter the MAC ID of the replacement Baseband Controller.

NOTE: Your CommScope service engineer will provide the new BC MAC ID.

A form titled "Search Device". It has a text input field labeled "Enter MAC ID:" with a magnifying glass icon to its right. Below the input field, it shows an example "(ex: 0005B94234F5)" and a note "Note: Search is case sensitive".

15 Select the Device configuration tab on the left margin.

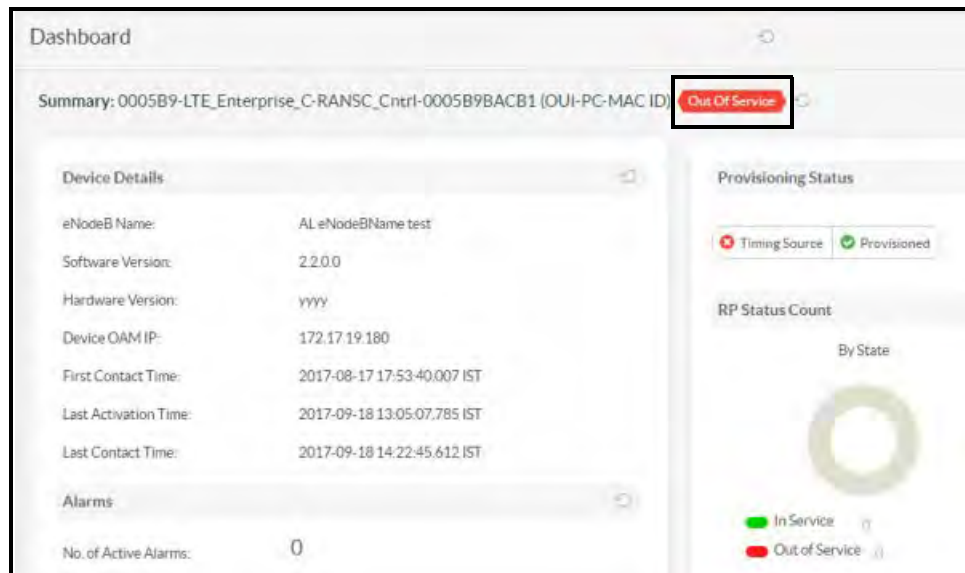

16 Configure the same parameters from the BC being replaced.

17 Select the Dashboard menu item.

The Controller will display "Out of Service" until the On-site installation is completed.

On-site activities

After the off-site activities are complete, you are ready to replace the BC module on-site.

1 Power off the ONECELL Baseband Controller.

- 2 Make a note of the existing cables connected to the failed ONECELL BC.
- 3 Label the cables identifying the port locations on the BC. Disconnect the cables.

- 4 Remove the GPS antenna cable from the BC (if applicable).

- 5 Turn the mounting screws on the BC front panel counterclockwise to loosen them and remove the BC module.

- 6 Insert the new BC module into the chassis and tighten the mounting screws.

- 7 Re-connect the cables as noted in [step 3](#).

- 8 Power on the controller.

- 9 Configure the BC.

Post-Install Verification

On-site

The operational state of the ONECELL system can be determined by the LED status on the BC's front panel. Additional information can be attained from the WebGUI status screens.

Off-site

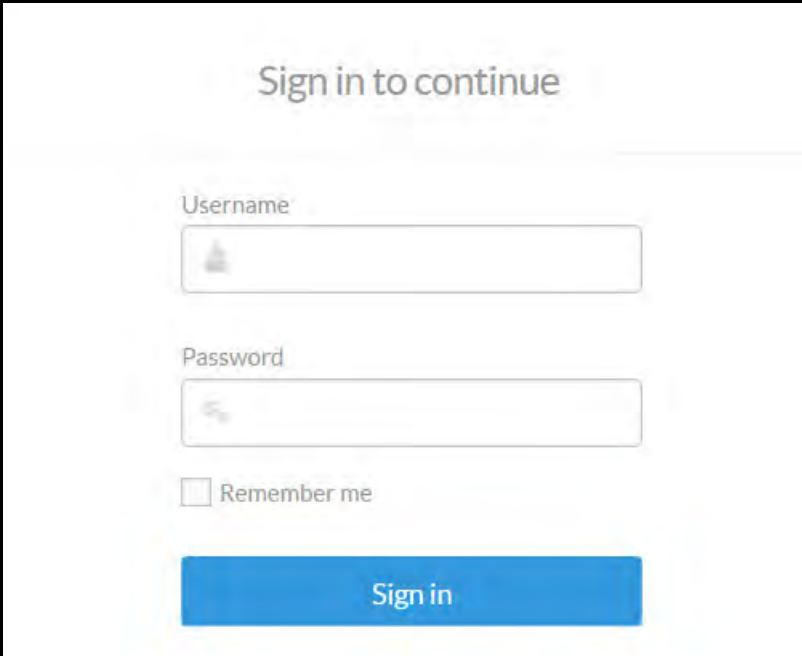

- 1 Open a supported Web browser.

NOTE: The DMS GUI supports Microsoft Edge 81 and later, Google Chrome 81 and later, and Mozilla Firefox Quantum 68 and later.

- 2 Enter the IP address for the Device Management portal.

`http://<IP Address DMS server>/deviceconsole`

The Sign In dialog box displays.

A screenshot of a web interface titled "Sign in to continue". It features two input fields: "Username" with a person icon and "Password" with a key icon. Below the password field is a checkbox labeled "Remember me". At the bottom is a blue button labeled "Sign in".

Search Device

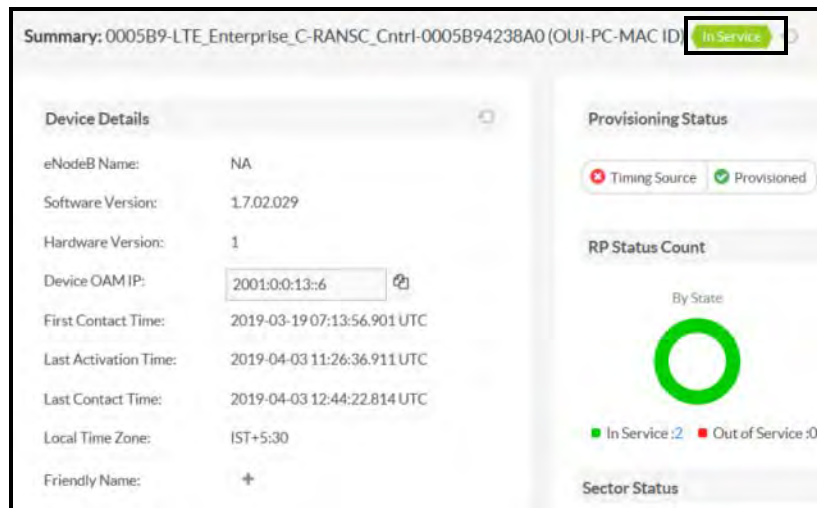

Enter MAC ID:

(ex: 0005B94234F5)

Note: Search is case sensitive

- 4** Enter the MAC ID of the new BC.

The BC Dashboard displays. The Summary at the top of the page should show "Ready."

NOTE: Provision the remaining Device configurations to align with the failed BC configuration on the DMS Device Configuration page.

- 5 Scroll to the bottom of the page to view the Device PnP status.

If all of the PnP boxes have green checks, the BC replacement is successful. Stop here.

If one or more of the PnP boxes are red, those activities failed. Go to the Device PnP page to identify the failed activity.

Replacing Radio Points prerequisites and on-site activities

Prepare the network for the Radio Point replacement.

- [Prerequisites](#)
- [On-site activities](#)

Prerequisites

The following table contains a checklist of prerequisites for replacing an RP.

	Prerequisite
	SSH password
	Replacement ONECELL RP module

	Prerequisite
	Laptop for Web GUI access
	Ethernet cable Note: Required for connecting the laptop to the ONECELL Baseband Controller Management port

On-site activities

Before replacing the RP, delete the RP from the system using the WebGUI.

- 1 Connect the Ethernet cable to the MGMT port on the BC's front panel.

- 2 Open a supported browser.
- 3 Enter the IP address for the GUI, using the format below.

`https://<IP address of Management Interface>:6002`

Example:

`https://192.168.8.1:6002`

The Sign In dialog box appears.

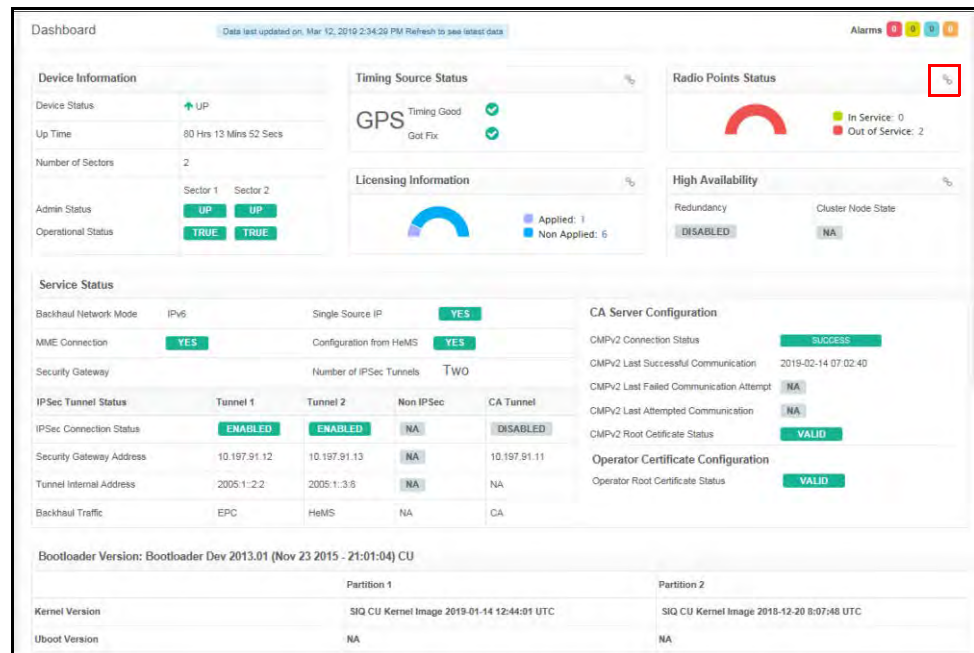

Sign in to continue

Username

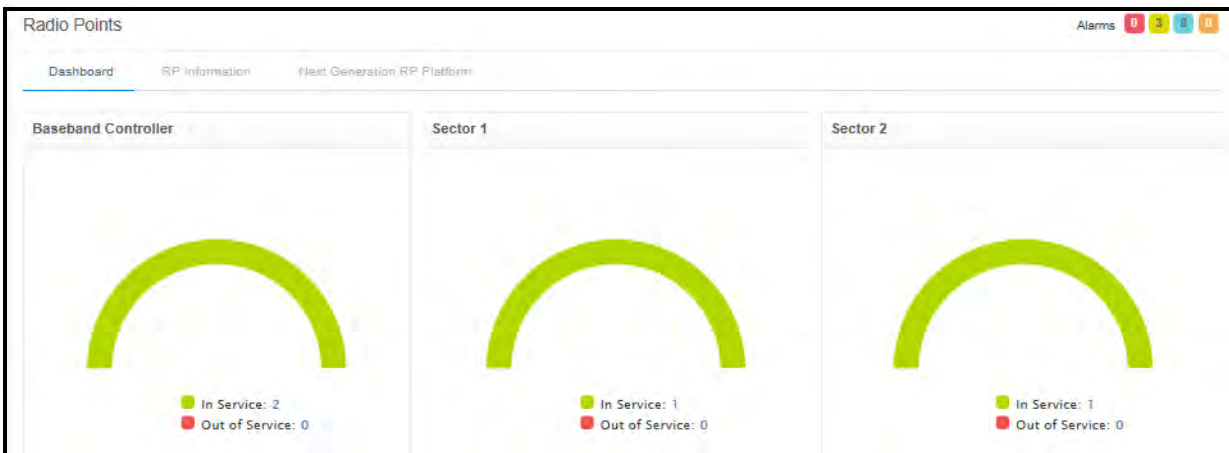

Password

Sign in

The Dashboard displays.

- On the Dashboard, click the Radio Points link. The Radio Points Dashboard displays.

- Click the RP Information tab.

The screenshot shows the 'Radio Points' dashboard with the 'RP Information' tab selected. At the top right, there are 'Alarms' with counts: 0 (red), 3 (yellow), 8 (blue), and 0 (orange). Below the header, there are three tabs: 'Dashboard', 'RP Information', and 'Next Generation RP Platform'. The main area shows a table of Radio Points. The table has columns: Serial Number, Sector, Device Status, Admin State, Radio Type, Transmitter Status, Timing Source Status, IP Address, and Radio Point Power Inuse (dBm). The first two rows of the table are highlighted. The first row has a checkbox selected, and the second row has a checkbox unselected. The 'Delete' button is highlighted in red. The table shows two entries for Sector 1, both with 'UP' status, 'LOCKED' admin state, 'NGRP' radio type, 'ENABLED' transmitter status, 'LOCKED' timing source status, IP address 10.223.5.21 and 10.223.5.22, and power inuse of 10 dBm.

Serial Number	Sector	Device Status	Admin State	Radio Type	Transmitter Status	Timing Source Status	IP Address	Radio Point Power Inuse (dBm)
0005B951AC28	1	UP	LOCKED	NGRP	ENABLED	LOCKED	10.223.5.21	10
0005B951AC29	1	UP	LOCKED	NGRP	ENABLED	LOCKED	10.223.5.22	10

- If one of the Radio Points is Down, select that RP by checking the box next to it.
- Click **Delete**.
- Check the Radio Point Information table to ensure the RP is deleted.

Replacing RP5100 series Radio Points

The following procedures provide instructions for replacing a ONECELL Radio Point (RP) module in a live network environment.

- [Replacing a ceiling RP5100i \(above tile\)](#)
- [Replacing a flown mounted RP5100i](#)

- [Replacing a pole mounted RP5100i](#)
- [RP post-replacement verification](#)

Replacing a ceiling RP5100i (above tile)

- 1** Remove the ceiling tile next to the mounted RP to allow access to the mounting hardware and Ethernet cable.

- 2** Remove the RP cover.

3 Disconnect the Ethernet cable.

- 4 Replace the cover and twist the RP clockwise to remove it. Set the failed RP aside.

- 5** Attach the mounting plate to the replacement RP.

NOTE: Apply thread locking compound to the screws prior to installation.

- 6** Attach the RP to the octagonal mounting plate and twist to engage.

- 7 Remove the cover and connect the Ethernet cable to the MR port.

NOTE: The cover is attached to the RP with two lanyards.

- 8** Attach the plastic cover to the RP.

- 9** Replace the ceiling tile.

- 10 Verify the RP installation. See The operational state of the RP can be determined by the LED status on the RP. Additional information can be attained from the WebGUI status screens.

For verification procedures, see [RP post-replacement verification](#).

Replacing a ceiling Indoor RP (on tile)

- 1 Remove the RP cover.

NOTE: The cover is attached to the RP with two lanyards.

2 Disconnect the Ethernet cable from the RP.

- 3** Replace the cover and twist the RP clockwise and remove the failed RP.

- 4** Attach the plate to the replacement RP.

NOTE: Apply thread locking compound to the screws prior to installation.

- 5** Attach the RP to the octagonal mounting plate.

- 6** Secure the RP to the plate by twisting the RP counterclockwise.

- 7** Remove the cover and connect the Ethernet cable to the MR port.

NOTE: The cover is attached to the RP with two lanyards.

- 8 Attach the plastic cover to the Radio Point.

- 9 Verify the RP installation. See The operational state of the RP can be determined by the LED status on the RP. Additional information can be attained from the WebGUI status screens.

For verification procedures, see [RP post-replacement verification](#).

Replacing a flown mounted RP5100i

- 1 Remove the RP cover.

NOTE: The cover is attached to the RP with two lanyards.

- 2 Disconnect the Ethernet cable.

- 3** Replace the cover and twist the RP clockwise.

4 Remove the failed RP.

- 5** Attach the mounting plate to the RP.

NOTE: Apply thread locking compound to the screws prior to installation.

- 6** Attach the RP to the octagon box.

- 7** Twist the RP counterclockwise.

8 Remove the RP cover.

NOTE: The cover is attached to the RP with two lanyards.

- 9** Connect the Ethernet cable to the MR port.

10 Replace the RP cover.

11 Verify the RP installation. See The operational state of the RP can be determined by the LED status on the RP. Additional information can be attained from the WebGUI status screens.

For verification procedures, see [RP post-replacement verification](#).

Replacing a pole mounted RP5100i

- 1 Remove the RP cover.

NOTE: The cover is attached to the RP with two lanyards.

- 2 Disconnect the Ethernet cable.

- 3** Loosen the clamp and remove the RP.

- 4** Attach the bracket to the replacement RP.

- 5** Attach the replacement RP to the pole using the clamp.

- 6 Remove the cover and connect the Ethernet cable to the RP.

NOTE: The cover is attached to the RP with two lanyards.

- 7 Replace the cover on the RP.

- 8 Verify the RP installation. The operational state of the RP can be determined by the LED status on the RP. Additional information can be attained from the WebGUI status screens.

For verification procedures, see [RP post-replacement verification](#).

Replacing RP5100i RF modules

The following procedures provide instructions for replacing a ONECELL Radio Point RF module.

Disconnect the Ethernet cable(s) on the RP to remove the power. Failure to do so will cause damage to the RP.

- 1 Remove the RP cover.

- 2 Disconnect the Ethernet cable on the RP.

- 3 Unscrew the RF module.

- 4** Remove the RF module.

- 5** Install the replacement RF module.

- 6** Secure it in the slot.

- 7** Connect the Ethernet cable.

- 8** Attach the RP cover.

- 9** Verify the RF module installation. The operational state of the RF module can be determined by the LED status on the RP. Additional information can be attained from the WebGUI status screens.

For verification procedures, see [RP post-replacement verification](#).

Replacing RP2000 series Radio Points

This procedure provides instructions for replacing a ONECELL RP2000 series Radio Point in a live network environment.

Replacing a ceiling Indoor RP (above tile)

- 1** Remove the ceiling tile below the mounted RP to allow access to the mounting hardware and Ethernet cable.

- 2** Loosen the locking screw.

NOTE: The locking screw is not on newer RP2000s.

- 3** Disconnect the Ethernet cable.

- 4** Twist the RP to remove it.

- 5** Remove the mounting plate from the failed RP and attach it to the replacement RP.

Set the failed RP aside.

NOTE: Apply thread locking compound to the screws prior to installation.

- 6** Attach the RP to the octagonal mounting plate and twist to engage.

7 Connect the Ethernet cable to the RP.

8 Replace the ceiling tile.

9 Verify the RP installation. See The operational state of the RP can be determined by the LED status on the RP. Additional information can be attained from the WebGUI status screens.

For verification procedures, see [RP post-replacement verification](#).

Replacing a ceiling Indoor RP (on tile)

- 1** Disconnect the Ethernet cable from the RP.

- 2** If there is a locking screw, loosen it.
- 3** Twist the RP.

- 4** Remove the RP. Remove the mounting plate from the RP and set the RP aside.

- 5** Attach the plate to the replacement RP.

NOTE: Apply thread locking compound to the screws prior to installation.

- 6** Attach the RP to the octagonal mounting plate.

- 7 Secure RP to octagon plate.

- 8 Connect the Ethernet cable to the RP.

- 9 Verify the RP installation. See The operational state of the RP can be determined by the LED status on the RP. Additional information can be attained from the WebGUI status screens.

For verification procedures, see [RP post-replacement verification](#).

Replacing a flown mounted Indoor RP

- 1 Disconnect the Ethernet cable.

- 2 Remove the RP.

- 3 Remove the mounting plate from the RP and set the failed RP aside.

- 4 Attach the mounting plate to the replacement RP.

NOTE: Apply thread locking compound to the screws prior to installation.

- 5** Attach the RP to the octagon plate.

6 Secure the RP.

- 7** Connect the Ethernet cable to the RP.

- 8** Verify the RP installation. See The operational state of the RP can be determined by the LED status on the RP. Additional information can be attained from the WebGUI status screens.

For verification procedures, see [RP post-replacement verification](#).

Replacing a pole mounted Indoor RP

- 1** Disconnect the Ethernet cable.

- 2** Loosen the clamp, remove the RP and set it aside.

- 3** Remove the bracket from the failed RP and attach it to the replacement RP.

Bracket

- 4** Attach the replacement RP to the pole using the clamp.

- 5** Connect the Ethernet cable to the RP.

- 6 Verify the RP installation. See The operational state of the RP can be determined by the LED status on the RP. Additional information can be attained from the WebGUI status screens.

For verification procedures, see [RP post-replacement verification](#).

Replacing a vertical pole mounted Rugged RP

- 1 Disconnect the Ethernet cable and the antenna couplers from the RP.

- 2** Remove the screws on the bottom of the RP and loosen the top screws.

- 3** Lift the RP off of the mounting plate and set it aside.

- 4 Insert two screws into the upper holes on the replacement RP.

NOTE: Do not tighten the screws.

Ensure that the RP is oriented correctly with the two antenna connectors at the top of the RP.

- 5 Hang the RP to the mounting bracket using the installed screws. Align holes at bottom location of bracket and install two additional screws.

- 6 Insert two screws on the bottom of the RP and tighten all four screws.

NOTE: The torque requirement for the mounting screws is 20-21 in-lbs.

- 7 Connect the antenna couplers on the top of the RP.

NOTE: Check the antenna coupler manufacturer's documentation for torque requirements.

- 8 Connect the Ethernet cable RJ45 end to the bottom of the RP.

- 9 Verify the RP installation. See The operational state of the RP can be determined by the LED status on the RP. Additional information can be attained from the WebGUI status screens.

For verification procedures, see [RP post-replacement verification](#).

Replacing a horizontal pole mounted Rugged RP

- 1 Disconnect the Ethernet cable and the antenna couplers from the RP.

- 2** Remove the screws on the bottom of the RP and loosen the top screws.

- 3 Lift the failed RP off of the mounting plate and set it aside.

- 4 Insert two screws into the upper holes on the replacement RP.

NOTE: Do not tighten the screws.

Ensure that the RP is oriented correctly with the two antenna connectors at the top of the RP.

- 5 Attach the RP to the mounting plate. Tighten the top screws on the RP and insert and tighten the bottom screws on the RP.

NOTE: The torque requirement for the mounting screws is 20-21 in-lbs.

- 6** Connect the antenna couplers on the top of the RP.

NOTE: Check the antenna coupler manufacturer's documentation for torque requirements.

- 7** Connect the Ethernet cable RJ45 end to the bottom of the RP.

- 8 Verify the RP installation. See The operational state of the RP can be determined by the LED status on the RP. Additional information can be attained from the WebGUI status screens.

For verification procedures, see [RP post-replacement verification](#).

Replacing a wall mounted Rugged RP

- 1 Disconnect the Ethernet cable and the antenna couplers from the RP.

- 2** Remove the screws on the bottom of the RP, loosen the top screws and remove the RP from the mounting plate. Set the RP aside.

- 3 On the replacement RP, insert two screws into the upper holes.

- 4 Attach the RP to the mounting plate. Tighten the top screws on the RP and insert the bottom screws on the RP.

NOTE: The torque requirement for the mounting screws is 20-21 in-lbs.

- 5** Connect the antenna couplers on the top of the RP.

NOTE: Check the antenna coupler manufacturer's documentation for torque requirements.

- 6** Connect the Ethernet cable RJ45 end to the bottom of the RP.

- 7 The operational state of the RP can be determined by the LED status on the RP. Additional information can be attained from the WebGUI status screens.
For verification procedures, see [RP post-replacement verification](#).

RP post-replacement verification

The operational state of the replaced RP can be determined by the LED status on the RP. Additional information can be attained from the WebGUI status screens.

- 1 Connect the Ethernet cable to the MGMT port on the BC's front panel.

- 2 Open a supported browser.
- 3 Enter the IP address for the GUI, using the format below.

`https://<IP address of Management Interface>:6002`

Example:

`https://192.168.8.1:6002`

The Sign In dialog box appears.

Sign in to continue

Username

Password

Sign in

- 4 Ensure the WebGUI is operating in Management Mode. The Dashboard displays.

- 5 On the Dashboard, click the Radio Points link. The Radio Points Dashboard displays.

- 6 Click the RP Information tab. The RP Information page displays.

Appendix D Field Replaceable Units

The screenshot displays the 'Radio Points' management interface. At the top, there are tabs for 'Dashboard', 'RP Information', and 'Mixed Generation RP Platform'. Below these, there are filters for 'Max Tx Power (dBm)', 'Sector 1: 10', and 'Sector 2: 10'. On the right, there are buttons for 'Standby', 'Lock', 'Delete' (highlighted with a red box), 'Reboot', and 'Reset'. A 'Show 5 entries' dropdown is present. The main table has the following columns: Serial Number, Sector, Device Status, Admin State, Radio Type, Transmitter Status, Timing Source Status, IP Address, and Radio Point Power Inuse (dBm). Two entries are shown:

Serial Number	Sector	Device Status	Admin State	Radio Type	Transmitter Status	Timing Source Status	IP Address	Radio Point Power Inuse (dBm)
0005B951A728	1	UP	LOCKED	NGRP	ENABLED	LOCKED	10.223.5.21	10
0005B951A729	1	UP	LOCKED	NGRP	ENABLED	LOCKED	10.223.5.22	10

At the bottom, there is a 'Showing 1 to 2 of 2 entries' indicator and 'Previous' and 'Next' navigation buttons.

7 Make sure the replaced RP is UP.

Cable installation and power separation guidelines

This section contains best practices for installing Ethernet cables and connecting them to RPs.

Overview	E-2
Cable handling	E-2
Cable termination	E-3
Lightning protection	E-12
Ceiling connector	E-15
Patch panel	E-17
Power separation guidelines	E-17

Overview

When installing Rugged RPs, cables that can withstand temperature extremes and inclement weather should be used. In outside environments, avoid contamination or damage to plugs. Plugs must be protected from sunlight and water in a suitable equipment housing or NEMA 4 rated box. It is also important to avoid exposure to water at cut ends of unfilled cables and cords. The following information is available to help you extend the operation of your RP and switches.

Cable handling

Indoor/outdoor cords can be routed outdoors above ground and indoors, and can be ordered in lengths long enough for direct (home-run) installations from switch to end equipment. Cords have 20% Insertion Loss De-rating so only 85 meters total can be supported. Extended lengths can be cut in two for terminating the indoor ends at protectors or panels. Terminations are similar to typical 4-pair indoor cables.

Unreel long lengths of cable to ensure the cable does not become twisted or caught on objects.

Figure E-1. Unreel cable

CommScope recommends using a sock fitted and secured over the plug to pull cable through long conduits.

[Sock information](#)

[Tie wrap information](#)

Figure E-2. Cable with sock attached using tie wrap

Feed the sock through the conduit and secure the sock on the terminal end of the cable with the tie-wrap. Once the sock and tie-wrap are in place, pull the cable through the conduit.

Cable termination

Before installing the Rugged RP, terminate the RP end of the Ethernet cable with the RJ45, IP67 connector provided in the box.

Figure E-3. RJ45, IP67 connector

Flip the plug anti-snag to make it easier to push through the cord grips (flip it back before plugging in).

Use the split grommet provided. Once it is in place, coat it with silicone to ensure the connector is sealed.

Figure E-4. Assembling the connector on the RP end

Cable splicing

Some cables are run in one piece from source to destination and have connector terminations. In other cases, two shorter pieces of cable need to be spliced together. When a cable is run to outdoor devices, you should take measures to ensure that cables are properly protected against moisture entering the cable. This is especially important when the jacket is stripped back from the wires.

Some cables are gel filled and the termination includes cleaning the excess gel and blocking the end with silicone sealant to prevent future leakage. A typical blocking method uses a 2 cm length of [Alpha Wire PVC-105-2](#) tubing or equivalent.

- 1** Fill all space inside the tubing with B-sealant.

- 2 Position the filled tube to overlap the end of the inner jacket and seal the gel. Clean off all excess sealant.

NOTE: Tape can be used to stabilize the tube for immediate termination before the sealant sets.

Cable termination

Shielded cables must be properly terminated, either grounded or isolated. For exposed installations requiring protection, the end of the shield can be bonded in various ways. The following procedure is an example of one method.

- 1 Make a slit along the length of the jacket. Be careful not to tear the underlying shielding.

- 2** Pull back the jacket along the slit and remove.

- 3** Fold back the foil shielding and drain wire to expose the inner jacket.

- 4** Prepare the inner jacket for blocking the gel and direct burial.

- a** Cut back the inner jacket
- b** Trim the flute
- c** Clean the excess gel

NOTE: The flute can be cut longer to match the blocking tube length.

- 5** Fill all space inside the tubing with B-sealant and position the filled tube to overlap the end of the inner jacket and seal the gel.

- 6** Fold the drain wire and foil back over the tube and position the foil to be folded back over the tube.

- 7** An extra piece of foil can be used to cover the foil seam.

- 8** For an HGS620 termination, wrap the drain wire at least two times around and position it where the spring clips will capture them.

- 9** Tape over the foil for stability.
10 Trim the wire ends.

Cable grounding

For CAT-6A cables, the shield termination method is to use the ground lug and B-bond clip that are available in the 12A1 Grounding Kit.

- 1 Fold the foil back over the jacket end and wrap the drain wire around the end and push the ground lug over the wrap.

- 2** Open the B-bonding clip to be placed and closed over the grounding lug.

- 3** The lug tail can be cut off or used for ground attachment.

- 4** Treat the inner jacket as described in [step 4 on page E-7](#).

For an isolated shield termination, the 1572A and 1592A outer jacket foil and drain wire are removed a short distance back from the termination and electrical tape is used to isolate the foil end.

Lightning protection

CommScope recommends including lightning protection in your ONECELL system to isolate equipment from surge damage.

Important guidelines

- Verify hole diameter – blocking may need to remain outside the cover
- Maintain pair twists up to termination points
- Avoid having pairs crossing over each other

Indoor box

To protect the cables in an indoor installation from lightning damage, CommScope recommends using the [ITW Linx CAT6-A-LAN](#) protector.

NOTE

The gel filled outdoor cable types will still need blocking. See [Cable splicing](#) and [Cable termination](#) for instructions on blocking cable.

Figure E-5. CAT6-A lightning protector

Outdoor protection

The following is an example of a pole mounted CAT-6A configuration for protecting remote equipment installed outdoors.

Table E-1 lists the recommended parts for installing the protection equipment.

Table E-1. CAT-6A protection equipment parts list

Part Name	Link to Part on Distributor's Web site
NEMA 4x enclosure	Allied Moulded fiberglass enclosure
Back panel	Allied Moulded back panel
Ground buss	Ditek surge protection buss
Bottom Mounted Liquid Tight Cordgrips	Heyco pre-assembled cordgrips
Bottom Mounted Liquid Tight Bushing	Heyco liquid tight bushings – snap-in
Protector	Ditek 110RJC6APOE Protector
Pole mount kit	Allied Moulded pole mount kit

Figure E-6. Remote equipment protection for outdoor devices

NOTE

Enclosure should be mounted close to the equipment for the best protection.

Figure E-7. Protector box mounted to pole

Ceiling connector

If surge protection is not needed, gel flooded cables can be blocked and transitioned to indoor cable using a ceiling connector. The following link is for the recommended CommScope part.

[Ceiling connector](#)

- 1 Terminate the indoor cable first – then lay down a bed of B sealant.

- 2** Clean all gel from the end of the OSP cable.

- 3** After the cable and conductors are positioned, fill the area around the cable end with sealant and close the connector housing.

Patch panel

CommScope recommends installing a patch panel in the NOC to connect and manage CAT-6A cables. The following is a list of recommended CommScope 24 and 48 port patch panels and high density information outlets.

- [760163436_HFTP-HD6B-1U-24](#)
- [760163444_HFTP-HD6B-2U-48](#)
- 760163451_HFTP-HD6B-1U-24
- 760163469_HFTP-HD6B-2U-48
- [760163519_HFTP-J6](#)
- 760163527_HFTP-J10G

For more information, go to CommScope.com or contact your CommScope customer representative.

Power separation guidelines

For power separation best guidelines, refer to the following standards:

- Telecommunications Pathways and Spaces, TIA-569-C
- Information technology – Implementation and operation of customer premises cabling – Part 2: Planning and installation, ISO/IEC 14763-2
- Information Technology – Cabling Installation – Part 2: Installation Planning and practices inside buildings, BS EN 50174-2
