# FCC TEST REPORT OF Huawei WCDMA/GPRS/GSM Mobile Phone

M/N: U528

May. 16, 2006

Reliability Laboratory of Huawei Technologies Co., Ltd.

**All Right Reserved** 

# **Notice**

| 1.       | The laboratory has obtained the accreditation of China National Accreditation        |
|----------|--|
| '        |  |
|          | Committee for Laboratories (CNAL), and accreditation number: L0310.                  |
| 2.       | The laboratory has obtained the accreditation of THE AMERICAN                        |
|          | ASSOCIATION FOR LABORATORY ACCREDITATION (A2LA), and                                 |
|          | Accreditation Council Certificate Number: 2174.01.                                   |
| 3.       | The laboratory has been listed on the US Federal Communications Commission           |
|          | list of test facilities recognized to perform electromagnetic emissions              |
|          | measurements. The site recognition number is 97456.                                  |
| 4.       | The laboratory also has been listed by the VCCI to perform EMC                       |
|          | measurements. The accreditation number is C1758, R1672, and T153.                    |
| 5.       | The test report is invalid if not marked with "exclusive stamp for the test report". |
| 6.       | Any copy of the test report is invalid if not re-marked with the "exclusive stamp    |
|          | for the test report".  |
| 7.       | The test report is invalid if not marked with the stamps or the signatures of the    |
|          | persons responsible for performing, revising and approving the test report.          |
| 8.       | The test report is invalid if there is any evidence of erasure and/or falsification. |
| 9.       | If there is any dissidence for the test report, please file objection to the test    |
|          | centre within 15 days from the date of receiving the test report.                    |
| 10.      | Normally, the test report is only responsible for the samples that have              |
|          | undergone the test.  |
| 11.      | Context of the test report cannot be used partially or in full for publicity and/or  |
|          | promotional purposes without previous written approval of the laboratory.            |

REPORT ON FCC Test of Huawei WCDMA/GPRS/GSM Mobile Phone

M/N: U528

Report No: SYBH(R) 33042006EB

REGULATION FCC CFR47 Part 2: Subpart J;

FCC CFR47 Part 24: Subpart E;

FCC CFR47 Part 15: Subpart B;

**CONCLUSION** There are 9 items need to be tested, 9 items have been

tested. The sample of the model completely meets the

requirements

**Final Judgement: Pass**

| -                                   | 15.109                   | Radiated Emission of Enclosure in Idle Mode | PASS   |

# 2 Product Description

#### 2.1 Production Information

#### 2.1.1 General Description

Huawei WCDMA/GPRS/GSM Mobile Phone is subscriber equipment in the WCDMA/GSM system. The frequency band is WCDMA/GSM/DCS/PCS. The Mobile Phone implements such functions as RF signal receiving / Transmitting, WCDMA protocol processing, voice, video and MMS service etc. Externally it provides SD/MMC card interface, earphone port (to provide voice service), USIM card interface and antenna interface.

#### 2.1.2 Support function and Service

The Mobile Phone support the function and service as follows:

Table 2 Service and Test mode List

| Service Name   | Characteristic   | Corresponding Test<br>Mode | Note |
|----------------|------------------|----------------------------|------|
| Voice and data | Modulation: GMSK | TM                         |      |
|                |                  |                            |      |

#### 2.2 Modification Information

For original equipment, following table is not application.

Table 3 Modification Information

| Table 6 Meanifeation information |                          |                |         |                    |
|----------------------------------|--------------------------|----------------|---------|--------------------|
| Model Number                     | Board/M                  | Original       | New     | Modify Information |
|                                  | odule                    | Version        | Version |                    |

|                                  |                          |                |         | LOUT O O TT 0      |
|                                  |                          |                |         |                    |

# 3 Test Site Description

The test site of:

Huawei Technologies Co. Ltd. P.O. Box 518129 Huawei base, bantian, Longgang District, Shenzhen, China

The test site description has been submitted to and registration granted under the registration number **97456** on March 11. 2003. The test site has been accredited

and the accredited number is **2714.01** in Jan of 2004.

## 3.1 Testing Period

The test have been performed during the period of

Feb. 01, 2006 to Feb. 10, 2006

## 3.2 General Set up Description

Huawei WCDMA/GPRS/GSM Mobile Phone U528 can support WCDMA mode and GSM/DCS/PCS Band. During this measurement, the Mobile Phone just works in WCDMA mode and GSM/DCS/PCS Band.

TM: Mobile Phone was controlled to transmit maximum power.

# 4 Product Description

#### 4.1 Technical Characteristics

#### 4.1.1 Frequency Range

Table 4 Frequency Range

| Uplink band:   | 1850 to 1910 MHz |
|----------------|------------------|
| Downlink band: | 1930 to 1990 MHz |

# 4.1.2 Channel Spacing / Separation

Table 5 Channel Spacing / Separation

| Channel spacing:    | 200 kHz |
|---------------------|---------|
| Channel separation: | 200 kHz |

# 4.1.3 Type of Emission

Table 6 Type of Emission

| rable of Type of Enfocient |         |  |
|----------------------------|---------|--|
| Emission Designation:      | 300KGXW |  |

According to CFR 47 (FCC) part 2, subpart C, section 2.201 and 2.202

#### 4.1.4 Environmental Requirements

Table 7 Environmental Requirements

| Minimum temperature: | - 10 °C  |
|----------------------|----------|
| Maximum temperature: | + 55 °C  |
| Relative Humidity:   | 5%-95%RH |

#### 4.1.5 Power Source

Table 8 Power Source

| AC voltage nominal: | ~220V      |
|---------------------|------------|
| AC voltage range    | ~100V-240V |
| AC current maximal: | 650mA      |

#### 4.1.6 Tune-up Procedure

According to CFR (FCC) part 2, subpart 2, section 2.1033(c) (9).

Please reference the document Tune-up Procedure in TCF.

## 4.1.7 Applied DC Voltages and Currents

According to CFR (FCC) part 2, subpart 2, section 2.1033(c) (8).

The voltage and current in the final RF stage is:

Table 9 Applied DC Voltages and Currents

| Voltage: | === +2.8V   |
|----------|---|
| Current: | 100mA According to CFR (FCC) part 2, subpart 2, section 2.1033(c) (8) |

FCC ID: QISU528

#### 4.2 EUT Identification List

#### 4.2.1 Board Information

Table 10 Board Information

| rable to Beard information          |                  |                |  |
|-------------------------------------|------------------|----------------|--|
| WCDMA/GPRS/GSM Mobile Phone         |                  |                |  |
|                                     | MN: U528         |                |  |
|                                     | Board and Module |                |  |
| Equipment Designation / Description | Serial Number    | Remarks        |  |
| -Main board                         | U41AC10641700331 | HD1U526M Ver.C |  |
| -Battery                            | BYD642500154     | U528           |  |

#### 4.2.2 Adapter Technical Data

AC/DCAdapter Model: TPCA-053065E

Manufacturer: TECH-POWER INTERNATIONAL CO.,LTD/Shenzhen

Input Voltage: ~100-240V ;50/60Hz

Output Voltage: +5.3V

Rated Power: 4W

#### 4.2.3 Battery Technical Data

Type: Rechargeable Li-ion Battery

Manufacturer: BYD COMPANY LIMITED/Shenzhen

Battery Model: U528
Rated capacity: 830mAH
Nominal Voltage: ---+3.7V
Charging Voltage: ---+5.3V

#### 4.2.4 FCC Identification

Grantee Code: QIS
Product Code: U528
FCC Identification: QISU528

# 5 Main Test Instruments

# 6 Transmitter Measurements

#### **6.1** Effective Radiated Power of Transmitter (EIRP)

#### 6.1.1 Test Conditions

Table 12 Test Conditions

| Preconditioning:     | 0.5 hour                        |
|----------------------|---------------------------------|
| Measured at:         | enclosure                       |
| Ambient temperature: | 23.5℃                           |
| Relative humidity:   | 55%                             |
| Test Configurations: | TM at high, middle ,low channel |

#### 6.1.2 Test Specifications and Limits

#### 6.1.2.1 Specification

CFR 47 (FCC) part 2.1046 and part 24.232

#### 6.1.2.2 Supporting Standards

Table 13 Supporting Standards:

| ANSI/TIA-603-C:2004 | Land Mobile FM or PM Communications Equipment |
|---------------------|---|
|                     | Measurement and Performance Standards         |

#### 6.1.2.3 Limits

Compliance with part 24.232, mobile/portable stations are limited to 2 watts EIRP peak power.  $W(dBm)=10*log~(W_{watts})$ .

Table 14 Limits

|                              | Limits    |
|------------------------------|-----------|
| Maximum Output Power (Watts) | < 2 Watts |
| Maximum Output Power (dBm)   | < 33 dBm  |

#### 6.1.3 Test Method and Setup

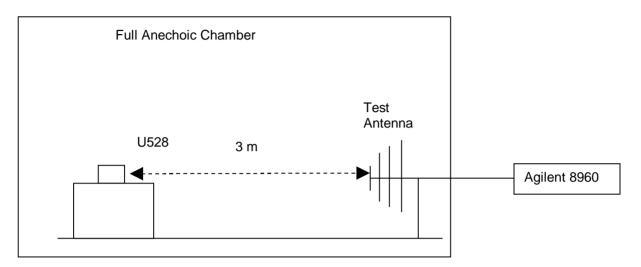

- (a) For transmitters other than single sideband, independent sideband and controlled carrier radiotelephone, ERP shall be measured when the transmitter is adjusted in accordance with the tune-up procedure to give the values of current and voltage on the circuit elements specified in 2.1033(c)(8). Connect the Mobile Phone to the wireless communication tester Agilent 8960 via the air interface. The band class is set as PCS.
- (b) Test the Radiated maximum output power by the Agilent 8960 received from test antenna.
- (c) Use substitution method to verify the maximum output power. The EUT is substituted by a dipole antenna. The dipole is connected to a signal generator. And then adjust the output level of the signal generator to get the same received power recorded in step (b) on Agilent 8960, and record the power level of Signal Generator. Of course, the cable loss at the test frequency should be compensated.

#### Test setup

#### Step 1: Pre-test

Step 2: Substitution method to verify the maximum EIRP

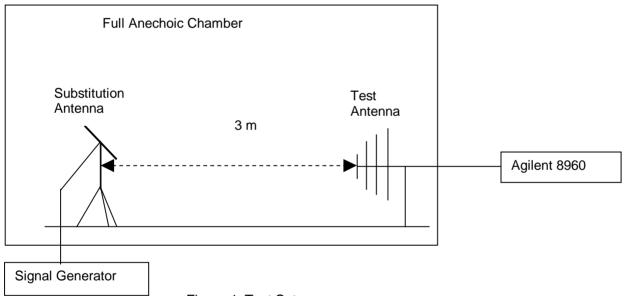

Figure 1. Test Set-up

NOTE: Effective radiated power (ERP) refers to the radiation power output of the EUT, assuming all emissions are radiated from half-wave dipole antennas.

There is a constant difference of 2.15 dB between EIRP and ERP.

ERP (dBm) =EIRP (dBm) – 2.15 (ITU-R Recommendation SM.329-10).

#### 6.1.4 Measurement Results

Table 15 Measurement Results

|                 | RF Output Power |             |             |
|-----------------|-----------------|-------------|-------------|
| TEST CONDITIONS | Channel 512     | Channel 661 | Channel 810 |
|                 | 1850.2MHz       | 1880.0MHz   | 1909.8MHz   |
|                 | dBm             | dBm         | dBm         |

# FCC ID: QISU528

|    |  | Measured | Limit | Measured | Limit | Measured | Limit |
|----|--|----------|-------|----------|-------|----------|-------|

#### 6.2.5 Conclusion

The equipment **PASSED** the requirement of this clause.

For the measurement results refer to appendix B with 4 pages.

#### 6.3 Occupied Bandwidth

#### 6.3.1 Test Conditions

Table 20 Test Conditions

| Preconditioning:     | 0.5 hour                        |
|----------------------|---------------------------------|
| Measured at:         | Antenna connector               |
| Ambient temperature: | 25 °C                           |
| Relative humidity:   | 55 %                            |
| Test Configurations: | TM at High, Middle, Low Channel |

#### 6.3.2 Test Specifications and Limits

#### 6.3.2.1 Specification

CFR 47 (FCC) part 2.1049 and part 24 subpart E

#### 6.3.2.2 Supporting Standards

Table 21 Supporting Standards:

| ANSI/TIA-603-C: 2004 |  | Land Mobile FM or PM Communications Equipment |  |
|----------------------|--|---|--|
|                      |  | Measurement and Performance Standards         |  |

#### 6.3.2.3 Limits

No specific occupied bandwidth requirement in part 24 subpart E, but the occupied bandwidth was defined in part 2.1049: the frequency bandwidth such that, below its lower and above its upper frequency limits, the mean powers radiated are each equal to 0.5 percent of the total mean power radiated by a given emission shall be measured.

Table 22 Limits

| 0.5 | pper /lower frequency limits |
|-----|------------------------------|
|-----|------------------------------|

#### 6.3.3 Test Method and Setup

Mobile Phone was connected to the Spectrum Analyzer E4445A via the one RF connector. The band class is set as PCS; Mobile Phone was controlled to transmit maximum power. Measure and record the occupied bandwidth of the Mobile Phone by the E4445A.

The OBW, that is the frequency bandwidth such that, below its lower and above its upper frequency limits, the mean powers radiated are each equal to 0.5 percent of the total mean power radiated by a given emission shall be measured under the following conditions as applicable:

Refer to 47CFR part2.1049 section (g)&(h).

- (g) Transmitter in which the modulating base band comprises not more than three independent channels when modulated by the full complement of signals for which the transmitter is rated. The level of modulation for each channel should be set to that prescribed in rule parts applicable to the services for which the transmitter is intended. If specific modulation levels are not set forth in the rules, the tests should provide the manufacturer's maximum rated condition.
- (h) Transmitters employing digital modulation techniques when modulated by an input signal such that

its amplitude and symbol rate represent the maximum rated conditions under which the equipment will be operated. The signal shall be applied through any filter networks, pseudorandom generators or other devices required in normal service. Additionally, the occupied bandwidth shall be shown for operation with any devices used for modifying the spectrum when such devices are optional at discretion of the user.

Measurement bandwidth (RBW): 3kHz (Resolution bandwidth)

Video bandwidth (VBW): 3kHz

#### **Test Set-up**

|  |  | (kHz)                    | (kHz)                    | (kHz)                    |
|  |  | 289 298                  |                          | 296                      |
| Refer to Appendix C                              |  |                          |                          |                          |

#### 6.3.5 Conclusion

The equipment **PASSED** the requirement of this clause. For the measurement results refer to appendix C with 4 pages.

#### 6.4 Band Edges Compliance

#### 6.4.1 Test Conditions

Table 24 Test Conditions

| Preconditioning:     | 0.5 hour                |  |
|----------------------|-------------------------|--|
| Measured at:         | Antenna connector       |  |
| Ambient temperature: | 25°C                    |  |
| Relative humidity:   | 55 %                    |  |
| Test Configurations: | TM at High, Low Channel |  |

#### 6.4.2 Test Specifications and Limits

#### 6.4.2.1 Specification

CFR 47 (FCC) part 2.1051 and part 24.238

#### 6.4.2.2 Supporting Standards

Table 25 Supporting Standards:

| ANSI/TIA-603-C: 2004 | Land Mobile FM or PM Communications Equipment |  |
|----------------------|---|--|
|                      | Measurement and Performance Standards         |  |

#### 6.4.2.3 Limits

Compliance with part 24.238, all spurious emission must be attenuated below the transmitter power by at least 43 +10  $\log_{10}$  P. (Whereas P is the rated power of the EUT).

Table 26 Limits

| Rated Power:          | 30dBm                            |
|-----------------------|----------------------------------|
| Required attenuation: | 43+10log (1) = 43 , 30 dBm -43dB |
| Absolute level        | - 13 dBm                         |

#### 6.4.3 Test Method and Setup

Mobile Phone was connected to the Spectrum Analyzer E4445A via the one RF connector, the band class is set as PCS. Mobile Phone was controlled to transmit maximum power. Measure and record band edges compliance of the Spectrum Analyzer E4445A.

RBW of 20 kHz (1% of 2MHz) was used up to 5MHz away from the band edge. So the FCC rules specify that RBW of 1MHz for measurements of emissions >1MHz away from the band edges ,the limit was adjusted with -13dBm to -30dBm to compensate for the reduced measurement bandwidth.

#### **Test Set-up**

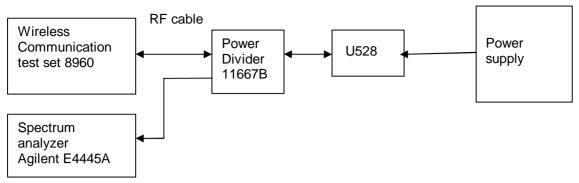

Figure 4. Test Set-up

#### 6.4.5 Conclusion

The equipment **PASSED** the requirement of this clause. For the measurement results refer to appendix D with 3 pages.

#### 6.5 Spurious Emission at Antenna Terminal

#### 6.5.1 Test Conditions

Table 28 Test Conditions

| Preconditioning:     | 0.5 hour                        |
|----------------------|---------------------------------|
| Measured at:         | Antenna connector               |
| Ambient temperature: | 25°C                            |
| Relative humidity:   | 55 %                            |
| Test Configurations: | TM at High, Middle, Low Channel |

#### 6.5.2 Test Specifications and Limits

#### 6.5.2.1 Specification

CFR 47 (FCC) part 2.1051 and part 24.238

#### 6.5.2.2 Supporting Standards

Table 29 Supporting Standards:

| ANSI/TIA-603-C: 2004 | Land Mobile FM or PM Communications Equipment |  |
|----------------------|---|--|
|                      | Measurement and Performance Standards         |  |

#### 6.5.2.3 Limits

Compliance with part 24.238, all spurious emission must be attenuated below the transmitter power by at least 43 +10 log<sub>10</sub> P. (Whereas P is the rated power of the EUT).

Table 30 Limits

| Rated Power:          | 30dBm                            |
|-----------------------|----------------------------------|
| Required attenuation: | 43+10log (1) = 43 , 30 dBm -43dB |
| Absolute level        | - 13 dBm                         |

#### 6.5.3 Test Method and Setup

Mobile Phone was connected to the Spectrum Analyzer E4445A and R&S FSU26 via the one RF connector, the band class is set as PCS. Mobile Phone was controlled to transmit maximum power. Measure and record the Conducted Spurious Emission of the Mobile Phone by the E4445A and R&S FSU26.

According to part 24.238, the defined measurement bandwidth as following:

24.238 (b) Measurement procedure: Compliance with these provisions is based on the use of measurement instrumentation employing a resolution bandwidth of 1 MHz or greater.

Measurement bandwidth (RBW) for 9 kHz up to 3GHz: 1 MHz; Measurement bandwidth (RBW) for 3GHz up to 12.5GHz: 1MHz; Measurement bandwidth (RBW) for 12.5GHz up to 20GHz: 1MHz;

| Relative humidity:   | 53 %                 |
| Test Configurations: | TM At middle channel |

#### 6.6.2 Test Specifications and Limits

#### 6.6.2.1 Specification

CFR 47 (FCC) part 2.1053 and part 24.238

#### 6.6.2.2 Supporting Standards

Table 33 Supporting Standards:

| ANSI/TIA-603-C: 2004 | Land Mobile FM or PM Communications Equipment |
|----------------------|---|
|                      | Measurement and Performance Standards         |

#### 6.6.2.3 Limits

Compliance with part 24.238, all spurious emission must be attenuated below the transmitter power by at least 43 +10  $log_{10}$  P. (Whereas P is the rated power of the EUT).

Table 34 Limits

| Rated Power:          | 30dBm (1W)                               |
|-----------------------|--|
| Required attenuation: | $43 + 10 \log_{10} (1W) = 43 \text{ dB}$ |
| Absolute level        | 30dBm - 43 dB= - 13 dBm                  |

#### 6.6.3 Test Method and Setup

(a) Measurements were made to detect spurious emissions radiated directly from the cabinet, control circuits, power leads, or intermediate circuit elements under normal conditions of installation and operation. Curves or equivalent data were supplied showing the magnitude of each harmonic and other spurious emission. For this test, single sideband, independent sideband, and controlled carrier transmitters shall be modulated under the conditions specified in paragraph 2.1049(c) as appropriate. For equipment operating on frequencies below 890 MHz, an Open Field Test is normally required with the measuring instrument antenna located in the far field at all test frequencies. In the event it is either impractical or impossible to make open field measurements (e.g. a broadcast transmitter installed in a building) measurement will be accepted of the equipment as installed. Such measurements must be accompanied by a description of the site where the measurements were made showing the location of any possible source of reflections, which might distort the field strength measurements. Information submitted shall include the relative radiated power of each spurious emission with the reference to the rated power output of the transmitter, assuming all emissions are radiated from half-wave dipole

#### FCC ID: QISU528

antennas.

- (b) Measurements specified in paragraph (a) of this section shall be made for the following equipment:
- (1) Those in which the spurious emission are required to be 60 dB or more below the mean power of the transmitter.
- (2) All equipment operating on frequencies higher than 25 MHz
- (3) All equipment where the antenna is an integral part of, and attached directly to the transmitter.
- (4) Other types of equipment as required, when deemed necessary by the Commission.

Huawei Mobile Phone U528 is equipment with non-integral antenna. And it should test according to part (b) of above section.

BTS simulator is connected to a communication antenna, by which communicate with the Mobile Phone inside the test site. The BTS simulator controls the Mobile Phone to transmit at maximum power which defined in specification of product when in traffic mode, field strength of spurious emission in idle mode were also tested. The Mobile Phone operates on a typical channel.

#### The test procedure:

- (a) For transmitters other than single sideband, independent sideband and controlled carrier radiotelephone, EIRP. shall be measured when the transmitter is adjusted in accordance with the tune-up procedure to give the values of current and voltage on the circuit elements specified in 2.1033(c)(8). Connect the Mobile Phone to the BTS simulator via the air interface. The band class is set as PCS.
- (b) Test the Radiated maximum output power by the Rohde and Schwarz ESMI Test Receiver from test antenna.
- (c) Use substitution method to verify the maximum output power. The EUT is substituted by a dipole antenna. The dipole is connected to a signal generator. And then adjust the output level of the signal generator to get the same received power recorded in step (b) on ESMI Test Receiver, and record the power level of Signal Generator. Of course, the cable loss at the test frequency should be compensated.

According to part 24.238, the defined measurement bandwidth as following:

24.238 (b) Measurement procedure: Compliance with these provisions is based on the use of measurement instrumentation employing a resolution bandwidth of 1 MHz or greater.

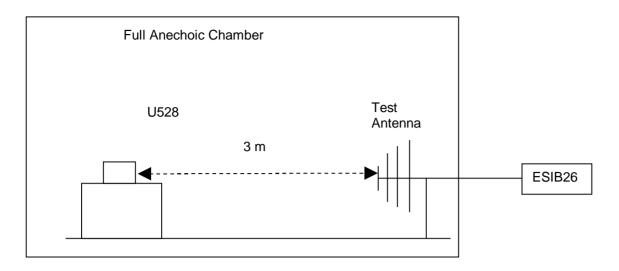

Measurement bandwidth (RBW) for 9 kHz up to 1GHz: 1 MHz; Measurement bandwidth (RBW) for 1GHz up to 12.75GHz: 1MHz; Measurement bandwidth (RBW) for 12.75GHz up to 20GHz: 1MHz;

#### Test setup

Step 1: Pre-test

Step 2: Substitution method to verify the maximum ERP

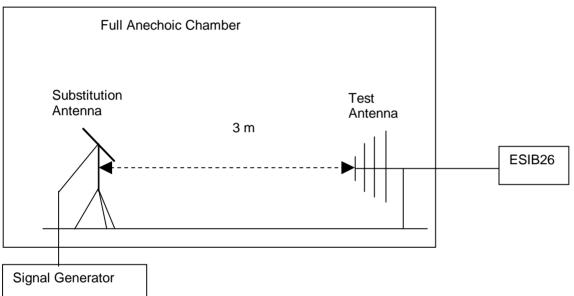

Figure 6. Test Set-up

NOTE: Effective radiated power (ERP) refers to the radiation power output of the EUT, assuming all emissions are radiated from half-wave dipole antennas.

#### 6.6.4 Measurement Results

#### 6.6.4.1 Pre-test Measurement Results

Table 35 Measurement Results

| Channel | Test Range  | Power | Spurious Level   | FCC limit | Result |
|---------|-------------|-------|------------------|-----------|--------|
| Number  | (Frequency) | [dBm] | measured [dBm]   |           |        |
| 661     | 9 kHz       | 29.97 | <- 13 dBm        | - 13 dBm  | Pass   |
|         | ~20GHz      |       | (See appendix F) |           |        |

#### 6.6.4.2 Substitution Results

No peak found in pre- test.

FCC ID: QISU528

#### Calculation Sample:

Table 36 Substitution Results

| Freq.<br>[MHz] | Measur<br>ement<br>Value<br>[dBm] | Substitution<br>Antenna<br>Type | Gain<br>[dBd] | Cable<br>Loss [dB] | Signal<br>Generator<br>Level<br>[dBm] | Substitution<br>Level<br>[dBm] | FCC<br>limit<br>[dBm] | Result |
|----------------|-----------------------------------|---------------------------------|---------------|--------------------|---------------------------------------|--------------------------------|-----------------------|--------|
| 3923.3<br>3    | -36.12                            | Horn Ant.                       | 7.85          | 2.20               | -41.24                                | -35.59                         | -13                   | Pass   |

Note: For get the EIRP. (Efficient Radiated Power) in substitution method, the following formula should take to calculate it,

ERP [dBm] = SGP [dBm] - Cable Loss [dB] + Gain [dBd]

NOTE: SGP- Signal Generator Level

#### 6.6.5 Conclusion

The equipment **PASSED** the requirement of this clause. For the measurement results refer to appendix F with 9 pages.

#### 6.7 Frequency Stability

#### 6.7.1 Test Conditions

Table 37 Test Conditions

| Preconditioning:     | 0.5 hour                        |
|----------------------|---------------------------------|
| Measured at:         | Antenna connector               |
| Ambient temperature: | 25°C                            |
| Relative humidity:   | 55 %                            |
| Test Configurations: | TM at High ,Middle, Low Channel |

#### 6.7.2 Test Specifications and Limits

#### 6.7.2.1 Specification

CFR 47 (FCC) part 2.1055 and part 24.235

#### 6.7.2.2 Supporting Standards

Table 38 Supporting Standards:

| ANSI/TIA-603-C: 2004 | Land Mobile FM or PM Communications Equipment |  |  |  |  |
|----------------------|---|--|--|--|--|
|                      | Measurement and Performance Standards         |  |  |  |  |

#### 6.7.2.3 Limits

No specific frequency stability requirement in part 2.1055 and part 24.235.

#### 6.7.3 Test Method and Setup

The frequency stability shall be measured with variation of ambient temperature as follows:

- (1) From -30 ° to +50 ° centigrade for all equipment except that specified in subparagraphs
- (2) and (3) of paragraph 2.1055
- (b) Frequency measurements shall be made at the extremes of the specified temperature range and at intervals of not more than 10° centigrade through the range. A period of time sufficient to stabilize all of the components of the oscillator circuit at each temperature level shall be allowed prior to frequency measurement. The short-term transient effects on the frequency of the transmitter due to keying (except for broadcast transmitters) and any heating element cycling normally occurring at each ambient temperature level also shall be shown. Only the portion or portions of the transmitter containing the frequency determining and stabilizing circuitry need be subjected to the temperature variation test.
- (d) The frequency stability shall be measured with variation of primary supply voltage as follows:
- (1) Vary primary supply voltage from 85 to 115 percent of the nominal value for other than hand carried battery equipment.
- (2) For hand carried, battery powered equipment, reduce primary supply voltage to the battery operating end point, which shall be specified by the manufacturer.
- (3) The supply voltage shall be measured at the input to the cable normally provided with the equipment, or at the power supply terminals if cables are not normally provided. Effects on frequency of transmitter keying (except for broadcast transmitters) and any heating element cycling at the nominal supply voltage and at each extreme also shall be shown.

(e) When deemed necessary, the Commission may require tests of frequency stability under conditions in addition to those specifically set out in paragraphs (a), (b), (c) and (d) of this section. (For example, measurements showing the effect of proximity to large metal objects, or of various types of antennas, may be required for portable equipment.)

#### Test Set up

Connect the Mobile Phone to the Wireless Communication test set 8960 via the connector. Then measure the frequency error by the Wireless Communication test set 8960. The Mobile Phone's output is matched with a 50  $\Omega$  load.

Figure 7. Test Set up

Note: \* Decreases with the logarithm of the frequency.

#### 7.1.3 Test Method and Setup

The Table-top EUT was placed upon a non-metallic table 0.8 m above the horizontal metal reference ground plane. EUT was connected to LISN and LISN was connected to reference Ground Plane. EUT was 80cm from LISN. The set-up and test methods were according to ANSI C63.4: 2003.

Conducted Disturbance at AC Port measurements were undertaken on the L and N Lines. The emissions were measured using a Quasi-Peak Detector and Average Detector.

Huawei Mobile Phone U528 was communicated with the BTS simulator through Air interface, the BTS

simulator controls the Mobile Phone to transmitter the maximum power which defined in specification of product. The Mobile Phone operated on the typical channel.

Measurement bandwidth (RBW) for 150kz to 30 MHz: 9 kHz;

#### **Test Set-up**

The Mobile Phone U528 was setup in the screened chamber and operated under nominal conditions.

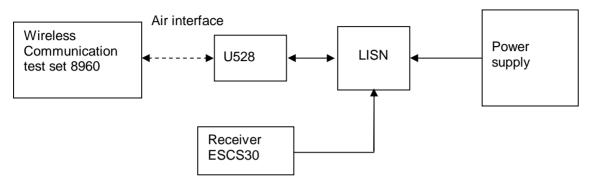

Figure 8. Test Set-up

#### 7.1.4 Measurement Results

Table 48 MEASUREMENT RESULT: QP DECTER

| Frequency | Level  | Transd | Limit  | Margin | Line | PE  |
|-----------|--------|--------|--------|--------|------|-----|
| (MHz)     | (dBµV) | (dB)   | (dBµV) | (dB)   |      |     |
| 0.339000  | 48.90  | 10.2   | 59     | 10.1   | L3   | GND |
| 0.483000  | 48.30  | 10.0   | 56     | 7.7    | L3   | GND |
| 1.023000  | 44.60  | 9.9    | 56     | 11.4   | L3   | GND |
| 2.148000  | 40.20  | 10.1   | 56     | 15.8   | L3   | GND |
| 5.779500  | 34.80  | 10.2   | 60     | 25.2   | L3   | GND |
| 24.247500 | 30.10  | 15.1   | 60     | 29.9   | L3   | GND |

Table 49 MEASUREMENT RESULT: AV DECTER

| Frequency | Level  | Transd | Limit  | Margin | Lina | חר  |
|-----------|--------|--------|--------|--------|------|-----|
| (MHz)     | (dBµV) | (dB)   | (dBµV) | (dB)   | Line | PE  |
| 0.343500  | 45.00  | 10.2   | 49     | 4.0    | L3   | GND |
| 0.411000  | 43.50  | 10.1   | 48     | 4.5    | L3   | GND |
| 1.095000  | 30.30  | 10.0   | 46     | 15.7   | L3   | GND |
| 3.493500  | 34.00  | 10.1   | 46     | 12.0   | L3   | GND |
| 8.425500  | 26.50  | 10.5   | 50     | 23.5   | L3   | GND |
| 13.767000 | 26.20  | 11.4   | 50     | 23.8   | L3   | GND |

#### 7.1.5 Conclusion

The equipment **PASSED** the requirement of this clause.

For the measurement results refer to appendix G with 2 pages.

#### 7.2 Radiated Emission of Enclosure in Ideal Mode

#### 7.2.1 Test Conditions

Table 50 Test Conditions

| Preconditioning:     | 0.5 hour          |
|----------------------|-------------------|
| Measured at:         | enclosure         |
| Ambient temperature: | +25 °C            |
| Relative humidity:   | 45 %              |
| Test Configurations: | TM at frequency M |

#### 7.2.2 Test Specifications and Limits

#### 7.2.2.1 Specification

CFR 47 (FCC) part 15.109

#### 7.2.2.2 Supporting Standards

Table 51 Supporting Standards:

| ANSI C63.4: 2003 | Methods of Measurement of Radio-Noise Emissions from Low      |
|------------------|---|
|                  | Voltage Electrical and Electronic Equipment in the Range of 9 |
|                  | kHz to 40 GHz   |

#### 7.2.2.3 Limits

The Radiated Emission of enclosure of EUT should compliance with the requirement of part 15.109. The limit showed in following table.

Table 52 Limits

|                    |    |          | Table 02 Ellitice |                |  |  |
|--------------------|----|----------|-------------------|----------------|--|--|
| Frequency<br>(MHz) | of | Emission | Radiated Limit    |                |  |  |
|                    |    |          | Unit( µ v/m)      | Unit(dB µ V/m) |  |  |
| 30-88              |    |          | 100               | 40             |  |  |
| 88-216             |    |          | 150               | 43.5           |  |  |
| 216-960            |    |          | 200               | 46             |  |  |
| 960-1000           |    |          | 500               | 54             |  |  |

#### 7.2.3 Test Method and Setup

The test site semi-anechoic chamber has met the requirement of NSA tolerance 4dB according to the standards: ANSI C63.4 (2003). The test distance was 3m.The EUT was set-up on insulator 80cm above the Ground Plane. The set-up and test methods were according to ANSI C63.4.The Radiated Disturbance measurements were made using a Rohde and Schwarz ESMI Test Receiver and control software ES-K1.

A preliminary scan and a final scan of the emissions were made from 30 MHz to 1GHz by using test

script of software; the emissions were measured using a Quasi-Peak Detector. The maximal emission value was acquired by adjusting the antenna height, polarisation and turntable azimuth in accordance with the software setup. Normally, the height range of antenna was 1m to 4m, the azimuth range of turntable was 0°to 360°, The receive antenna has two polarizations V and H.

Huawei Mobile Phone U528 was communicated with the BTS simulator through Air interface. The Mobile Phone operated on the typical channel and the Mobile Phone worked in idle mode, transmitter was not work in this test.

Measurement bandwidth: 30 MHz – 1000 MHz: 120 k Hz

#### Test set up

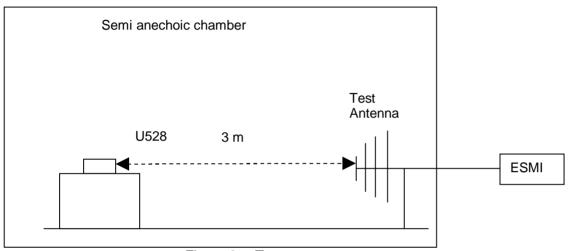

Figure 9. Test set up

#### 7.2.4 Measurement Results

Table 53 MEASUREMENT RESULT: QP DECTER

| Frequency (MHz) | Level<br>(dBµV/m | Transd (dB) | Limit<br>(dBµV/m<br>) | Margin<br>(dB) | Height (cm) | Azimuth (deg) | Polarisation |
|-----------------|------------------|-------------|-----------------------|----------------|-------------|---------------|--------------|
| 56.400000       | 34.60            | -18.4       | 40.0                  | 5.4            | 100.0       | 302.00        | VERTICAL     |
| 66.960000       | 23.00            | -19.1       | 40.0                  | 17.0           | 100.0       | 53.00         | VERTICAL     |
| 112.980000      | 20.10            | -12.2       | 43.5                  | 23.4           | 154.0       | 264.00        | HORIZONTAL   |
| 167.460000      | 12.90            | -13.8       | 43.5                  | 30.6           | 100.0       | 155.00        | VERTICAL     |
| 236.520000      | 25.60            | -11.9       | 46.0                  | 20.4           | 100.0       | 78.00         | VERTICAL     |
| 941.280000      | 29.70            | 0.4         | 46.0                  | 16.3           | 100.0       | 0.00          | VERTICAL     |

#### 7.2.5 Conclusion

The equipment **PASSED** the requirement of this clause. For the measurement results refer to appendix H with 2 pages.

# 8 System Measurement Uncertainty

For a 95% confidence level, the measurement expanded uncertainties for defined systems, in accordance with the recommendations of ISO 17025 as following:

Table 54 System Measurement Uncertainty

| Item  | s                          | Extended Uncertainty |
|---|----------------------------|----------------------|
| Effective Radiated Power of Transmitter               | EIRP (dBm)                 | U=3dB; k=2           |
| Band Width  | Magnitude (%)              | U=0.2%; k=2          |
| Band Edge Compliance                                  | Disturbance Power (dBm)    | U=2.0dB; k=2         |
| Conducted Spurious<br>Emission at Antenna<br>Terminal | Disturbance Power (dBm)    | U=2.0dB; k=2         |
| Frequency Stability                                   | Frequency<br>Accuracy(ppm) | U=0.21ppm; k=2       |
| Field Strength of Spurious Radiation                  | ERP(dBm)                   | U=3dB; k=2           |
| Conducted Output Power                                | Power(dBm)                 | U=0.39dB; k=2        |
| Conducted Emission at Power Port                      | Disturbance Voltage (dBµV) | U=4dB; k=2           |
| Radiated Emission of enclosure at ideal mode          | Field strength (dBµV/m)    | U=5dB; k=2           |
