

# Control is Profit!

## ProfitFabRFid

### Automated Data Collection Solution

Hassle free data collection gives you the ProfitFabRFid to better profitability

Cost effectiveness, better job costing, a more efficient shop floor and better profit margins are pretty typical goals for most manufacturing companies.

To achieve those goals where do you start? With accurate data collection, of course!

But you already knew this... but you're also thinking about the problems associated with data collection:

- Employees misuse or abuse the data collection system.
- Employees forget to log themselves in or out of jobs.
- Employees don't understand how the data collection system works, causing them to clock into the wrong jobs, wrong operations, or enter incorrect material usage information.
- A language barrier exists between the user interface and the user.
- Employees lose a lot of productive time walking back and forth to the data collection terminals between jobs.
- Employees don't use bar code readers efficiently, if at all.
- Data collection terminals are expensive and require periodic upgrades to maintain minimum requirements.

Manufacturing Management  
Technologies

# Empowering small to mid-sized organizations to manage and coordinate their daily operations and customer interactions.

## How does this work?

All your employees need to do is place their Employee ID card and Route Sheet (Job Traveler) in a bin located right at their workstation. That's it.

With this simple procedure, ProfitFab RFid will read all of the employee and job related information and feed it to the data collection software.

ProfitFab RFid is fully compatible with ProfitFab *ERP*'s current data collection interface, and the two systems can run concurrently. And, ProfitFab *TRAK* updates your data in real time.

## How do we do this?

ProfitFab RFid is based on a high-end RFID technology that allows an antenna positioned at every workstation to read the data that is contained on a coded tag attached to the Employee ID cards and your Route Sheets (Job Travelers).

## Just imagine...

- Machine and employee times are collected and recorded automatically and accurately, in real time.
- There is no user interface to contend with, no prompts or data to fill out.
- Automatically track multiple employees and multiple jobs (nesting) at a single workstation.
- Eliminate the need for costly data collection terminals or computers, no more keyboards or bar code readers either.
- Increased data collection accuracy by eliminating "miss-keyed" employee, work station or job information.
- Increased productivity by eliminating the need for employees to leave their workstations to log into and out of jobs.

Micro Concepts & Solutions Inc.

Our new ProfitFabRFid data collection eliminates all of those concerns and will ultimately lead you down the road to increased shop floor efficiency.
