Dear Sirs,

- 1) Please provide photo's of the modifications made to the device. Submit the photo's as a separate document so that they can be held confidential.

New internal photos has been uploaded to your web site.

- 2) Indicate the frequency range of radiated measurements for the UWB bandwidth test. Plots were only submitted to 1 GHz.

See uploaded document from our test lab. (SA800 email...)

- 3) Provide data table for QP measurements below 960 MHz. Report data per C63.4 Section 10.1.8.2, please submit the highest emission of the fundamental with the frequency and the frequency and level of the three highest emissions relative to the limit.

See uploaded document from our test lab. (SA800 email...)

- 4) Verify that both labeling requirements of 15.509(g) and 15.19 will be placed on the device.

We were not aware of this! For the uwb-units that we've got granted so far we did not have to put two labels on the devices. Please verify that no mistakes has been made and we will put both labels on the unit.

- 5) Verify that the new frequency range is 540-935 MHz.

See uploaded document from our test lab.(SA800 email...)
