NOKI78 - RX-113

The 15B tests have been done twice with accessories: first with AC charger, headset and Smart cover and second time with AC charger, HDMI cable, television, USB Memory stick, headset and USB adapter cable.

The test setups are exactly the same for radiated emission and AC power line conducted emission tests, see the accessory lists under sections 2 and 3 of FCC15B_RX-113_03.pdf and FCC15B_RX-113_16.pdf.

The used setups occupy the ports better than the “traditional” set of mouse, keyboard and display would. Note, that all these accessories use nowadays USB connector.

Sincerely Yours

Kalle Hannila

System Manager, EMC
