RE: FCC ID: QMNRM-41_ATCB002269
Attention: Louis Le / Elizabeth Parish

I have a few comments on this Application. Please note that further comments may arise in response to answers provided to the questions below.

1. Please note that the SAR power measurements for the device are in conducted power while the EMC report shows ERP and EIRP values. Please note that the FCC requires that correlative power data be taken so a determination can be made if the device was transmitting at the maximum available power during both EMC and SAR testing. Please note that plotted power data in the in the file "Exhibit_6_Test_Plots_Attachment_A1.pdf" has been provided, but, while certain assumptions might be made, there is no indication on these plots if this is conducted power or not. The screen shot only says "power out". It is therefore not possible to determine if the same power measurement method has been used to correlate power data between the SAR and EMC report. Please either verify and clearly identify the plots for power in the above mentioned file as to what they are meant to convey, or please re-test SAR using ERP/EIRP power measurements so correlation to the EMC report power can be made.

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
