► PLAYER FEATURES

- VR is a portable digital audio player as well as digital voice recorder. User can save his/her voice as MP3 files.
- VR is very useful/powerful tool for recording a business talk, meeting, consultation, telephone/mobile phone conversation, school lectures, foreign language lesson/lectures, tapes, FM broadcasting, instantaneous ideas, interview. User can not only play the sound or messages repeatedly as high quality original sound but also save into your PC.
- Differently other voice recorders, VR can save your voice as MP3 files without PC (no encoding), so user can listen & play the saved songs and messages through built-in speaker of main-set itself as well as PC. User can enjoy the listening of MP3 music and broadcasting which you saved.

■ High quality recording sound

User can record sound or voice at a high quality audio like a professional sound.

■ Compact & Ultra Slim design(9.5mm)

VR is smaller than a business card with an eye-catching ultra-slim design and its thickness is only 9.5mm.

■ Can save voice as MP3 file format

User can save his/her voice as MP3 files in PC permanently. User can enjoy listening recorded voice and sound at high quality original sound whenever he/she wants.

■ Multi-lingual support

VR supports various languages like a English, Korean, Chinese, Japanese, French etc. it can be displayed on LCD.

■ Very fast data transmission (USB Support)

USB interface allows you to save download time with very fast operation and recharge battery through USB port as well.

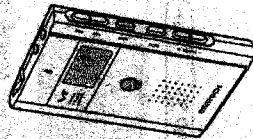

■ High sensitive internal microphone

Adopting omnidirectional high sensitive internal microphone allows you to record and catch the sound of all direction very easily and conveniently.

■ Firmware upgradeable function

VR has Firmware Up-grade ability: User can update the functions very easily and always enjoy emerging standards & enhanced features.
