

FCC Approval for Transmitter VB-CA17G

Working principles:

Coding IC: PT2262 makes up of 3-status fixed coding method. While pressing on the button, the 17th foot of PT2262 will output the PWM data, resonating with the high frequency transistor: 2SC3356 (R25) in 315 MHz, and transmitting high frequency modulation signal of ASK to the space by built-in antenna.
