

This 2.4GHz Wireless Audio & Video Sender lets you enjoy satellite TV, DVD, VCR, CDs and many other audio/video media in another room - without purchasing additional components, moving existing components or running cables. The 2.4 GHz Wireless Audio/Video Transmitter uses wide-band FM to transmit true discrete stereo audio signals. The circular polarized high-gain directional transmitting and receiving antennas minimize interference, resulting in maximum clarity and a signal range of up to 300 feet (NTSC) 750 feet (PAL).

The system not only allows you to send crisp audio/video from one area to another, it also gives you the ability to control the source using your existing remote control device. It converts the infrared (IR) signal emitted by your remote control to a radio frequency (RF) signal in UHF band at the Receiver and sends it back to the Transmitter where the RF signal is converted back to the original IR signal and beamed to the audio/video source.
