### **1 General Information**

#### **1.1 General Description**

The equipment under test (EUT) is a transmitter for Buzz Wild Racer operating at 27.145 MHz which is controlled by a crystal. The EUT is powered two 1.5 V AA size batteries. The EUT has a pair of control levers on its left and right side to control forward, backward, left and right movement. It also has a button on the EUT for Laser Blast sound.

The brief circuit description is listed as follows :

- IC U2 and associated circuit act as encoding.
- Q3, X2 and associated circuit act as oscillation.
- Q4 and associated circuit act as modulation and amplification.

#### **1.2 Related Submittal Grants**

The receiver for this transmitter is exempted from the Part 15 technical rules per 15.101(b).

## **TEST REPORT**

Report No. : AC018165-1

Date : 2002 October 08

### **2 Description of the radiated emission test**

#### **2.1 Test Procedure**

Radiated emissions measurements are investigated and taken pursuant to the procedures of ANSI C63.4 – 1992.

The equipment under test (EUT) was placed on a non-conductive turntable with dimensions of 1.5m x 1m and 0.8m high above the ground. 3m from the EUT, a broadband antenna mounting on the mast received the signal strength. The turntable was rotated to maximize the emission level. The antenna was then moving along the mast from 1m up to 4m until no more higher value was found. Both horizontal and vertical polarization of the antenna were placed and investigated.

#### **2.2 Test Result**

The fundamental emission was based on measurements employing the peak detector on the open area test site.

The harmonic emissions meeting the requirement of section 15.209 are based on measurements employing the CISPR quasipeak detector.

\* Emissions appearing within the restricted bands shall follow the requirement of section 15.205.

It was found that the EUT meet the FCC requirement.
