

Date: _____

To: Installer of the Quantified Ag Gateway

Please be aware that the installation of the device requires the use of a surge suppressor in line with the antenna. Please ensure that the surge suppressor is installed in a location that it is not accessible, such as on a pole, 10 ft. or higher. This will ensure that the antenna cable is not tampered with, disconnected, or replaced with an incompliant antenna.

Failure to install the device accordingly will void the user's authority to operate the equipment and will cause it to be out of compliance with the FCC's regulations.

Please supply a signed copy of this attestation from each installer.

Thank you,

By: _____ Mr Vishal Singh
