

## **Annex to test report # 17566RET.101:**

### **Radiated emission data for emissions in Restricted Bands**

Spurious emissions of the transmitter was measured all over the spectrum. Special attention was taken in the emissions in the Restricted bands, including spurious emissions at the upper bandedge, in the 2483.5 – 2500 MHz restricted band, and the second and third harmonics.

The only spurious signals found in the Restricted Bands were the ones indicated in page 30 of test report # 17566RET.101. No spurious signals were found within the 2483.5 – 2500 MHz restricted band and spurious at 2<sup>nd</sup> and 3<sup>rd</sup> harmonics were not found either.
