

General description of golf remote control:

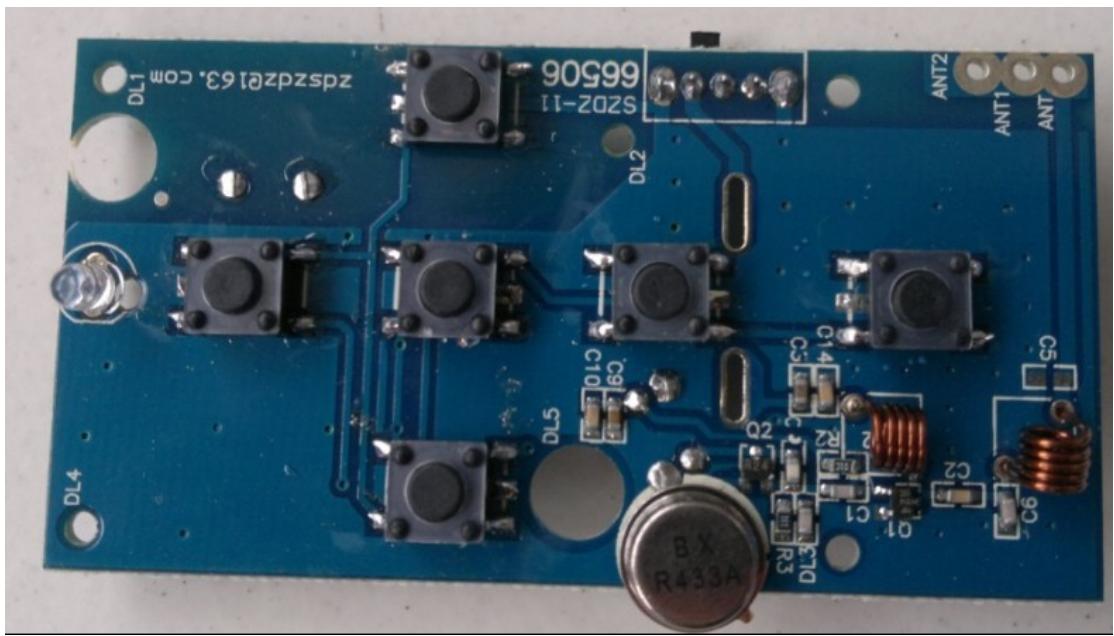

1. The voltage of remote control is 3 volt and the frequency is 433.92MHZ. The range of the remote control varies between 80-120 yards.
2. Each remote control directs one controller box in the golf trolley. The input voltage of controller box is 12volt and the output maximum current is 28Ah. The controller box has the functions of controlling trolley to move forward, move backward, turn left, turn right and stop.

The drawing schematic:

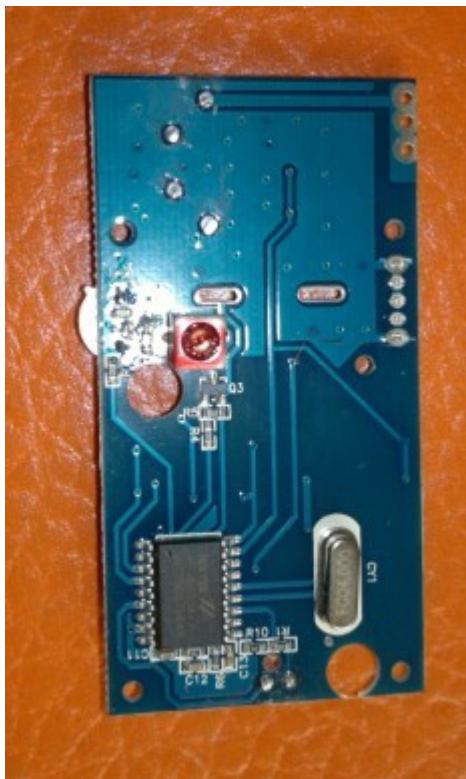

The frequency of remote: 433.92MHZ
