RFMD PA RF9304E3.3 improvement:

To improve ESD performance of the RFMD power amplifier, component N700, a new version that does not use the IPC (Integrated Passive Components) has been implemented. This new PA is called RF9304E3.2. The E3.2 uses integrated discrete passive components as the output matching of the PA. These integrated discrete components should be considered as much more reliable with respect to ESD/EOS. Change is identical to the one done for RH-12 (ATCB002144).
