RE: FCC ID: QTLRM-391_ATCB005765
Attention: Yao Shuo-Lisa

I have a few comments on this Application. Please note that further comments may arise in response to answers provided to the questions below.

1. Please note that other than the phone serial number the reference to HAC in one and the date of test, I cannot adequately tell the reasons for the different reports. While I can assume one is for a device with HAC and one is for a device without HAC, I cannot tell if this is the actual reason. Perhaps the one report is to perform ERP/EIRP on the phone HAC is to be performed. I do not know. Please explain why two separate reports for radiated power have been provided and please explain the difference.
2. Please provide the analyzer setting (i.e. res bw, vid bw etc) for the BT test report conducted spurious emissions in test report "Exhibit_6_RM-391_Cph_FCC_0748_05_15C_outputpower.pdf."
