Dear Mike,

Thanks for your comments and I am sorry for submitting enough information for the product.

The Transmitter is almost same with Keyless Enter System for vehicle. As you know, the section 15.231(a) allow data transmission for control signal. Enclosed please find a manual for overall system. The controller has a receiver board storing max. 5 phone numbers for emergency situation. If the switch on the transmitter is pushed, the receiver receive the signal and send this signal to the main board in the controller and then the controller activate make phone calls automatically.

I hope enclosed system manual cover your requirement for AN03T2588.

The revised ID Label for receiver is not a problem to send that to you, but the noise from the controller over the class B limit. Is that no problem? Please confirm me that regarding this matter.

Best regards,

Y. G. Gwon

Notice\_content

-----  
Question #1: Per 15.231 (a) requirements, data transmission is not allowed under 15.231 (b) of FCC rules. The emission designator is F1D which is data transmission. Please address this non-compliance issue.

Question #2: This device and its associated receiver is to be used in weapon detection. The description in the user manual does not provide enough information to demonstrate how the detection can be made. Please provide a detail description to address the detection methods.

Best Regards

Mike Kuo

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information within 60 days of the original e-mail date may result in application dismissal and forfeiture of the filing fee. Also, please note that partial responses increase processing time and should not be submitted. Any questions about the content of this correspondence should be directed to the e-mail address listed below the name of the sender.
