

## **Response to TCB Findings**

1. Please provide a more detailed technical description of the transmitters used.

Response: Supplied

2. Please confirm that the LISN used for AC line conducted emissions test was a 50ohm/50uH LISN

Response: From the EMCO "operation manual" for the 3816/2 L.I.S.N.; the specification page lists network inductance as 50uH/250uH, and network impedance as 50 ohms. This unit is considered a 'dual' unit, and has been a common LISN used for C.E. measurements for many years.

3. Please provide antenna specifications

Response: Provided

4. Please provide MPE calculation for the transmitters at the intended operation distance from all persons

Response: Supplied.

5. Please insert RF exposure statements into the user's manual.

Response: Supplied, please see the amended pages to the user's manual.
